02. INTRODUCTION

A. RISK FACTORS

STANDARD RISK FACTORS

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down.
- Past performance of the sponsors / the asset management company / mutual fund does not indicate or guarantee the future performance of the scheme of the mutual fund.
- There is no assurance or guarantee that the objective of the mutual fund will be achieved.
- Franklin India Dynamic Accrual Fund is only the name of the scheme and do not in any manner indicate either the quality of the scheme or its future prospects and returns.
- The Sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs.1 lakh made by it towards setting up the Fund.
- Investors in the Scheme are not being offered any guaranteed / assured returns.
- There is no guarantee or assurance on the frequency or quantum of dividends (which shall be at the discretion of the AMC/Trustee and also depend on the availability of adequate distributable surplus) although there is every intention to declare dividends in Dividend Plan.

SCHEME SPECIFIC RISK FACTORS

1. The performance of the scheme may be affected by the corporate performance, macro-economic factors, changes in Government policies, general levels of interest rates and risk associated with trading volumes, liquidity and settlement systems in the securities markets.
2. Low trading volumes, settlement periods and transfer procedures may restrict the liquidity of the scheme's investments. Transacting may become difficult due to extreme volatility in the market resulting in constriction in volumes. Additionally, changes in the SEBI/ RBI regulations/Guidelines may have an adverse impact on the liquidity of the scheme. Different segments of the Indian financial markets have different settlement periods, and such period may be extended significantly by unforeseen circumstances. The length of time for settlement may affect the Scheme in the event the Scheme has to meet an inordinately large number of redemption requests. In addition, the Trustee at its sole discretion reserves the right to limit or withdraw sale and/or repurchase/redemption and/or switching of the units in the scheme (including any one of the Plans of the scheme) temporarily or indefinitely under certain circumstances. For details refer the Section '**Suspension of sale of units**' and '**Suspension of redemption of units**'. The scheme will retain certain investments in cash or cash equivalent for the day to day liquidity requirements.
3. **Interest rate risk:** This risk results from changes in demand and supply for money and other macroeconomic factors and creates price changes in the value of debt instruments. Consequently, the Net Asset Value of the scheme may be subject to fluctuation. Changes in the interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby possible movements in the NAV. This may expose the scheme to possible capital erosion.
4. **Credit risk or default risk:** This refers to the risk that an issuer of a fixed income security may default

(i.e. will be unable to make timely principal and interest payments on the security). Default risk / credit risk arises due to an issuer's inability to meet obligations on the principal repayment and interest payments. Because of this risk corporate debentures are sold at a yield above those offered on Government Securities, which are sovereign obligations and free of credit risk. Normally the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.

5. **Market risk:** This risk arises due to price volatility due to such factors as interest sensitivity, market perception or the credit worthiness of the issuer and general market liquidity, change in interest rate expectations and liquidity flows. Market risk is a risk which is inherent to investments in securities. This may expose the scheme to possible capital erosion.
6. **Reinvestment risk:** This risk refers to the interest rate levels at which cash flows received for the securities in the Scheme are reinvested. Investments in debt instruments are subject to reinvestment risks as interest rates prevailing on interest or maturity due dates may differ from the original coupon of the bond, which might result in the proceeds being invested at a lower rate. The additional risk from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
7. **Liquidity or Marketability Risk:** This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk today is a characteristic of the Indian fixed income market. E.g. historically, the securitized debt securities segment has witnessed low liquidity. This could lead to higher costs for secondary market trading, if the fund witnesses volatile flows.
8. Risks of investing in floating rate debt instruments or fixed rate debt instruments swapped for floating rate return:
 - a. **Interest rate movement (Basis Risk):** As the fund will invest in floating rate instruments, these instruments' coupon will be reset periodically in line with the benchmark index movement. Normally, the interest rate risk of a floating rate instrument compared to a fixed rate instrument is limited. The changes in the prevailing rates of interest will likely affect the value of the Scheme's holdings until the next reset date and thus the value of the Scheme's Units. Increased rates of interest, which frequently accompany inflation and / or a growing economy, are likely to have a negative effect on the value of the Units. The value of securities held by the Scheme generally will vary inversely with changes in prevailing interest rates. The fund could be exposed to the interest rate risk (i) to the extent of time gap in resetting of the benchmark rates, and (ii) to the extent the benchmark index fails to capture the interest rate movement.
 - b. **Spread Movement (Spread Risk):** Though the basis (i.e. benchmark) gets readjusted on a regular basis, the spread (i.e. markup) over benchmark remains constant. This can result in some volatility to the holding period return of floating rate instruments.
 - c. **Settlement Risk (Counterparty Risk):** The floating rate assets may also be created by swapping a fixed return to a floating rate return. In such a swap, there may be an additional risk of counterparty who will pay floating rate return and receive fixed rate return.
9. Certain fixed income securities give an issuer the right to call its securities, before their maturity date, in periods of declining interest rates. The possibility of such pre-payment risk may force the fund to re-invest the proceeds of such investments in securities offering lower yields, thereby reducing the fund's interest income.
10. The scheme may invest in non-publicly offered debt securities. This may expose the scheme to liquidity risks.
11. Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risks. Accordingly the scheme's risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.
12. Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the scheme.

Risks associated with Securitised Debts

13. Different types of Securitised Debts in which the scheme would invest carry different levels and types of risks. Accordingly the scheme's risk may increase or decrease depending upon its investments in Securitised Debts. e.g. AAA securitised bonds will have low Credit Risk than a AA securitised bond. Credit Risk on Securitised Bonds may also depend upon the Originator, if the Bonds are issued with Recourse to Originator. A Bond with Recourse will have a lower Credit Risk than a Bond without Recourse. Underlying Assets in Securitised Debt may be the Receivables from Auto Finance, Credit Cards, Home Loans or any such receipts. Credit risk relating to these types of receivables depends

upon various factors including macro-economic factors of these industries and economies. To be more specific, factors like nature and adequacy of property mortgaged against these borrowings, loan agreement, mortgage deed in case of Home Loan, adequacy of documentation in case of Auto Finance and Home Loan, capacity of borrower to meet its obligation on borrowings in case of Credit Cards and intentions of the borrower influence the risks relating to the assets (borrowings) underlying the Securitised Debts. Holders of Securitised Assets may have Low Credit Risk with Diversified Retail Base on Underlying Assets, especially when Securitised Assets are created by High Credit Rated Tranches. Risk profiles of Planned Amortisation Class Tranches (*PAC*), Principal Only Class Tranches (*PO*) and Interest Only Class Tranches (*IO*) will also differ, depending upon the interest rate movement and Speed of Pre-payments. A change in market interest rates/prepayments may not change the absolute amount of receivables for the investors, but affects the reinvestment of the periodic cash flows that the investor receives in the securitised paper.

14. Presently, secondary market for securitised papers is not very liquid. There is no assurance that a deep secondary market will develop for such securities. This could limit the ability of the investor to resell them. Even if a secondary market develops and sales were to take place, these secondary transactions may be at a discount to the initial issue price due to changes in the interest rate structure
15. Securitised transactions are normally backed by pool of receivables and credit enhancement as stipulated by the rating agency, which differ from issue to issue. The Credit Enhancement stipulated represents a limited loss cover to the Investors. These Certificates represent an undivided beneficial interest in the underlying receivables and there is no obligation of either the Issuer or the Seller or the originator, or the parent or any affiliate of the Seller, Issuer and Originator. No financial recourse is available to the Certificate Holders against the Investors' Representative. Delinquencies and credit losses may cause depletion of the amount available under the Credit Enhancement and thereby the Investor Payouts may get affected if the amount available in the Credit Enhancement facility is not enough to cover the shortfall. On persistent default of an Obligor to repay his obligation, the Seller may repossess and sell the underlying Asset. However many factors may affect, delay or prevent the repossession of such Asset or the length of time required to realize the sale proceeds on such sales. In addition, the price at which such Asset may be sold may be lower than the amount due from that Obligor.

Risks associated with derivatives

16. Derivatives are high risk, high return instruments as they may be highly leveraged. A small price movement in the underlying security could have a large impact on their value and may also result in a loss. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.
17. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.
18. Interest rate swaps and Forward Rate Agreement require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that the derivative adds to the portfolio and the ability to forecast failure of another party (usually referred to as the "counter-party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mis-pricing or improper valuation of derivatives, the credit risk where the danger is that of a counter-party failing to honor its commitment, liquidity risk where the danger is that the derivative cannot be sold at prices that reflect the underlying assets, rates and indices, and price risk where the market price may move in adverse fashion.
19. The Scheme may find it difficult or impossible to execute derivative transactions in certain circumstances. For example, when there are insufficient bids or suspension of trading due to price limit or circuit breakers, the Scheme may face a liquidity issue.
20. The Stock Exchange may impose restrictions on exercise of options and may also restrict the exercise of options at certain times in specified circumstances and this could impact the value of the portfolio.

Risks associated with Securities Lending

21. Engaging in securities lending is subject to risks related to fluctuations in collateral value and settlement/liquidity and counter party risks. The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return

the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

Risks associated with Short-selling of Securities

22. Purchasing a security entails the risk of the security price going down. Short selling of securities (i.e. sale of securities without owning them) entails the risk of the security price going up there by decreasing the profitability of the short position. Short selling is subject to risks related to fluctuations in market price, and settlement/liquidity risks. If required by the Regulations, short selling may entail margin money to be deposited with the clearing house and daily mark to market of the prices and margins. This may impact fund pricing and may induce liquidity risks if the fund is not able to provide adequate margins to the clearing house. Failure to meet margin requirements may result in penalties being imposed by the exchanges and clearing house.

Risks associated with overseas investment

23. To the extent the assets of the scheme are invested in overseas financial assets, there may be risks associated with currency movements, restrictions on repatriation and transaction procedures in overseas market. Further, the repatriation of capital to India may also be hampered by changes in regulations or political circumstances as well as the application to it of other restrictions on investment. In addition, country risks would include events such as introduction of extraordinary exchange controls, economic deterioration, bi-lateral conflict leading to immobilisation of the overseas financial assets and the prevalent tax laws of the respective jurisdiction for execution of trades or otherwise.
24. **Currency Risk:** The fund may invest in overseas mutual fund / foreign securities as permitted by the concerned regulatory authorities in India. Since the assets will be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by changes/fluctuations in the value of the foreign currencies relative to the Indian Rupee.
25. **Country Risk:** The Country risk arises from the inability of a country, to meet its financial obligations. It is the risk encompassing economic, social and political conditions in a foreign country, which might adversely affect foreign investors' financial interests.

Risk Mitigation Factors:

- Interest Rate Risk: The Fund seeks to mitigate this risk by keeping the maturity of the schemes in line with the interest rate expectations.
- Credit risk or default risk: The Fund will endeavour to minimise Credit/Default risk by primarily investing in medium-high investment grade fixed income securities rated by SEBI registered credit rating agencies. The historical default rates for investment grade securities (BBB and above) have been low.
- Reinvestment Risk: Reinvestment risks will be limited to the extent of coupons received on debt instruments, which will be a very small portion of the portfolio value.
- The scheme may take positions in interest rate derivatives to hedge market/interest rate risks.
- Liquidity or Marketability Risk: The fund will endeavour to minimise liquidity risk by investing in securities having a liquid market.

B. REQUIREMENT OF MINIMUM NUMBER OF INVESTORS

The Scheme/Plan shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme/Plan(s). In case the Scheme / Plan(s) does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme / Plan(s) shall be wound up and the units would be redeemed at applicable NAV. The two conditions mentioned above shall be complied within each subsequent calendar quarter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days notice to redeem his exposure over the 25 % limit. Failure on the part of the said investor to redeem his exposure over the 25 % limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

*including investments in Foreign Securities as may be permitted by SEBI/RBI upto the limit specified for applicable asset class in the asset allocation table above.

Under normal circumstances, the scheme intends to invest primarily in debt instruments of low to medium risk.

While it anticipates that it will limit money market instruments to less than 25% of the total assets of the Scheme, the investment Manager may elect to invest a higher percentage of the Scheme's portfolio in such money market instruments for the purpose of maintaining a defensive investment posture. In evaluating the asset allocation of the Scheme's portfolio, the Investment Manager will consider current debt and equity market conditions, taking into account factors prevailing at that time, with the intends at all times being to protect the Unitholder's interests.

The scheme may enter into derivatives in line with the guidelines prescribed by SEBI from time to time. The scheme may take exposure in derivatives up to a maximum of 50% of its AUM. The exposure limit per scrip/instrument shall be to the extent permitted by the SEBI Regulation for the time being in force. These limits will be reviewed by the AMC from time to time.

It must be clearly understood that the percentages stated above are only indicative and not absolute and that they can vary substantially depending upon the perception of the Investment Manager, the intention being at all times to seek to protect the interests of the Unit holders. The asset allocation pattern described above may alter from time to time on a short-term basis on defensive considerations, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors (i.e., for reasons other than downgrade in rating) and would, in such cases, shall be rebalanced within 30 days from date of deviation. However, if the asset allocation pattern is to be altered for other reasons, as this is a fundamental attribute, the procedure outlined in the paragraph on fundamental attributes below, shall be followed.

Notwithstanding the foregoing, the Trustee of the Mutual Fund may from time to time at its absolute discretion review and modify the investment strategy provided such modification is in accordance with the SEBI Regulations.

NOTE: The investment under Direct Plans shall have the same portfolio as that of the plan/option under which it is introduced, and hence the same investment objectives and investment pattern as that of the existing respective Scheme/Scheme Portfolio.

D. WHERE WILL THE SCHEME INVEST

Subject to the SEBI Regulations, investment objective and the asset allocation pattern mentioned above, the Scheme may invest in various types of instruments including, but not limited to, any of the following:

The securities may be acquired through public offerings (IPOs), secondary market operations, auctions, open market operations, private placement, rights offers or negotiated deals. The Scheme may also enter into repurchase and reverse repurchase obligations in all securities held by it as per the guidelines and regulations applicable to such transactions.

OVERVIEW OF DEBT MARKET

The Indian debt markets are one of the largest markets in Asia. Government and Public Sector enterprises are predominant borrowers in the market. While interest rates were regulated till a few years back, there has been a rapid deregulation and currently both the lending and deposit rates are market determined.

The bond markets are developing fast with the rapid introduction of new instruments including derivatives. Foreign Institutional Investors are also allowed to invest in Indian debt markets now. The average trading volume in the market ranges between Rs.50,000 crores to Rs.70,000 crores, of which about 90% comprises of the government securities.

The various debt instruments currently available for investments are:

Instruments	Current Yields*	Liquidity
Central/State Government securities	6.20% to 7.50%	Very high
PSU Bonds/Corporate debentures	6.60% to 11.50%	Medium – High
Commercial Papers/Certificate of deposits	6.25% to 9.50%	High
Call/Notice Money	6.00% to 6.50%	Very high
Repo / CBLO	5.50% to 6.50%	Very high

*Yields as of June 2017

The actual yields will, however, vary in line with general levels of interest rates and debt/money market conditions prevailing from time to time.

INVESTMENTS IN DERIVATIVE INSTRUMENTS

Brief note on investment in derivative instruments

As part of the Fund Management process, the Trustee may permit the use of derivative instruments such as index futures, stock futures and options contracts, warrants, convertible securities, swap agreements, Forward Rate Agreement (FRA) or any other derivative instruments that are permissible or may be permissible in future under applicable regulations and such investments shall be in accordance with the investment objectives of the scheme.

On the fixed income side, an interest rate swap agreement from fixed rate to floating rate is an example of how derivatives can be an effective hedge for the portfolio in a rising interest rate environment.

Derivatives can be either exchange traded or can be over the counter (OTC). Exchange traded derivatives are listed and traded on Stock Exchanges whereas OTC derivative transactions are generally structured between two counterparties.

Derivatives may be high risk - high return instruments, upon leveraging. As they are highly leveraged, a small price movement in the underlying security could have a large impact on their value and may also result in a loss.

Position Limits:

The schemes may enter into derivative transactions in line with the guidelines prescribed by SEBI from time to time. The scheme may take exposure in derivatives up to a maximum of 50% of its AUM. The exposure limit per scrip/instrument shall be to the extent permitted by the SEBI Regulation for the time being in force. These limits will be reviewed by the AMC from time to time.

Currently, the position limits for Mutual Funds and its schemes, as permitted by the SEBI Regulations, are as under:

The cumulative gross exposure through equity, debt and derivative positions should not exceed 100% of the net assets of the scheme. Exposure due to hedging positions may not be included in the above mentioned limit subject to the following:

- Hedging positions are the derivative positions that reduce possible losses on an existing position in securities and till the existing position remains.
- Hedging positions cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under limits mentioned above.
- Any derivative instrument used to hedge has the same underlying security as the existing position being hedged.
- The quantity of underlying associated with the derivative position taken for hedging purposes does not exceed the quantity of the existing position against which hedge has been taken.
- Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned above.

Further, the total exposure related to option premium paid must not exceed 20% of the net assets of the scheme. Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.

Purpose of investment:

- Trading in derivatives by the scheme shall be restricted to hedging and portfolio balancing purposes.

- The scheme shall fully cover its positions in the derivatives market by holding underlying securities/cash or cash equivalents/option and/or obligation for acquiring underlying assets to honour the obligations contracted in the derivatives market.
- Separate records shall be maintained for holding the cash and cash equivalents/securities for this purpose.
- The securities held shall be marked to market by the AMC to ensure full coverage of investments made in derivative products at all time.

Valuation:

- The traded derivatives shall be valued at market price in conformity with the stipulations of sub clauses (i) to (v) of clause 1 of the Eighth Schedule to the Securities and Exchange Board of India (Mutual Funds) Regulations, 1996.
- The valuation of untraded derivatives shall be done in accordance with the valuation method for untraded investments prescribed in sub clauses (i) and (ii) of clause 2 of the Eighth Schedule to the Securities and Exchange Board of India (Mutual Funds) Regulations, 1996.

Interest Rate Swaps:

The Indian markets have faced high volatility in debt and equity markets. An interest rate swap is a contractual agreement between two counter-parties to exchange streams of interest amount on a notional principal basis. In this, one party agrees to pay a fixed stream of interest amount against receiving a variable or floating stream of interest amount. The variable or floating part is determined on a periodical basis.

Mutual Funds may enter into plain vanilla interest rate swaps for hedging purposes. The counter party in such transactions has to be an entity recognized as a market maker by RBI. Further, the value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme. Exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme.

➤ Purpose of Interest Rate Swaps:

- The Indian markets have faced high volatility in debt and equity markets. An interest rate swap is a contractual agreement between two counter-parties to exchange streams of interest amount on a notional principal basis. In this, one party agrees to pay a fixed stream of interest amount against receiving a variable or floating stream of interest amount. The variable or floating part is determined on a periodical basis.
- The scheme shall use derivative position for hedging the portfolio risk on a non-leverage basis. The scheme shall fully cover their positions in the derivatives market by holding underlying securities / cash or cash equivalents / option and / or obligation for acquiring underlying assets to honour the obligations contracted in the derivatives market.

Let us look at an example of an interest rate swap:

Entity A has Rs.20 crores, 3 month asset which is being funded through call. Entity B, on the other hand, has deployed Rs.20 crores in overnight call money market, 3 month liability. Both the entities are taking on an interest rate risk.

To hedge against the interest rate risk, both the entities can enter into a 3 month swap agreement based on say MIBOR (Mumbai Inter Bank Offered Rate). Through this swap, entity B will receive a fixed pre-agreed rate (say 8%) and pay NSE MIBOR (“the benchmark rate”) which will neutralize the interest rate risk of lending in call. Similarly, entity A will neutralize its interest rate risk from call borrowing as it will pay 8% and receive interest at the benchmark rate.

Assuming the swap is for Rs.20 crores 1 September to 1 December, Entity A is a floating rate receiver at the overnight compounded rate and Entity B is a fixed rate receiver. On a daily basis, the benchmark rate fixed by NSE will be tracked by them.

On December 1, they will calculate as explained below:

Entity A is entitled to receive daily compounded call rate for 92 days and pay 8% fixed.

Entity B is entitled to receive interest on Rs.20 crores @ 8% i.e. Rs.40.33 lakhs, and pay the compounded benchmark rate.

Thus on December 1, if the total interest on the daily overnight compounded benchmark rate is higher than Rs.40.33 lakhs, entity B will pay entity A the difference and vice versa.

Forward Rate Agreement (FRA)

A FRA is basically a forward starting IRS. It is an agreement between two parties to pay or receive the difference between an agreed fixed rate (the FRA rate) and the interest rate (reference rate) prevailing on a stipulated future date, based on a notional principal amount for an agreed period. The only cash flow is the difference between the FRA rate and the reference rate. As is the case with IRS, the notional amounts are not exchanged in FRAs.

Example: Let us assume that a scheme has an investment of Rs.10 crore in an instrument that pays interest linked to NSE Mibor. Since the NSE Mibor would vary daily, the scheme is running interest rate risk on its investment and would stand to lose if rates go down. To hedge itself against this risk, the Scheme could do an IRS where it receives a fixed rate (assume 10%) for the next 5 days on the notional amount of Rs. 10 crore and pay a floating rate (NSE Mibor). In doing this, the scheme would effectively lock itself into a fixed rate of 10% for the next five days. The steps would be:

1. The scheme enters into an IRS on Rs. 10 crore from December 1 to December 6. It receives a fixed rate of interest at 10% and the counter party receives the floating rate (NSE Mibor). The scheme and the counter party exchange a contract of having entered into this IRS.
2. On a daily basis, the NSE Mibor will be tracked by the counterparties to determine the floating rate payable by the scheme.
3. On December 6, the counterparties will calculate the following:
 - The scheme will receive interest on Rs. 10 crore at 10% p.a. for 5 days i.e. Rs.1,36,986/-
 - The scheme will pay the compounded NSE Mibor for 5 days by converting its floating rate asset into a fixed rate through the IRS.
 - If the total interest on the compounded NSE Mibor rate is lower than Rs. 1,36,986/-, the scheme will receive the difference from the counterparty and vice-versa. In case the interest on compounded NSE Mibor is higher, the scheme would make a lower return than what it would have made had it not undertaken IRS.

Risks:

Interest rate swaps and FRA require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that the derivative adds to the portfolio and the ability to forecast failure of another party (usually referred to as the "counter-party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mis-pricing or improper valuation of derivatives, the credit risk where the danger is that of a counter-party failing to honour its commitment, liquidity risk where the danger is that the derivative cannot be sold at prices that reflect the underlying assets, rates and indices, and price risk where the market price may move in adverse fashion.

As is clear from the above examples, engaging in derivatives has the potential to help the scheme in minimising the portfolio risk and/or improve the overall portfolio returns.

Please note these examples are hypothetical in nature and are given for illustration purposes only. The actual returns may vary depending on the market conditions.

The AMC retains the right to enter into such derivative transactions as may be permitted by the applicable regulations from time to time.

SECURITIES LENDING

If permitted by SEBI under extant regulations/guidelines, the Scheme may also engage in scrip lending as provided under Securities Lending Scheme 1997, and other applicable guidelines/regulations, as amended from time to time. Scrip lending means lending a security to another person or entity for a fixed period of time, at a negotiated compensation. The security lent will be returned by the borrower on expiry of the stipulated period.

The AMC will comply with the required reporting obligations and the Trustee will carry out the reviews required under SEBI/RBI guidelines. Further a maximum of 40% of net assets will be deployed in securities lending and the maximum single party exposure will be restricted to 10% of net assets outstanding at any point of time.

Engaging in scrip lending is subject to risks related to fluctuations in the collateral value / settlement /

liquidity / counter party.

SHORT SELLING OF SECURITIES

If permitted by SEBI Regulations, the Scheme may engage in short selling of securities in accordance with the guidelines issued by SEBI. Short sale of securities means selling of securities without owning them. The AMC will comply with the guidelines issued by SEBI in this behalf, including reporting obligations and the Trustee will carry out the reviews required under said guidelines.

Engaging in short sale of securities is subject to risks related to fluctuations in market price, and settlement/ liquidity risks.

INVESTMENT IN FOREIGN SECURITIES

The Scheme may invest in permitted Foreign Securities and any other overseas instruments as may be permitted by SEBI/RBI/other regulatory authorities from time to time.

SEBI vide its circular dated September 26, 2007 has issued guidelines pertaining to investments in overseas financial assets. Accordingly the investments in Foreign Securities shall be made in compliance with the said circular.

The Fund has appointed a dedicated fund manager for the purpose of investment in overseas financial assets (except for investment in units/securities of overseas mutual funds/unit trusts/ETFs and such other securities/instruments as may be permitted by SEBI from time to time) as prescribed in the aforesaid SEBI circular. Service of custodian and other intermediaries/advisors of international repute will be used for managing and administering such investments. The appointment of such intermediaries shall be in accordance with the applicable requirements of SEBI and within the permissible ceilings of expenses. The fees and expenses would include, besides the investments management fees, custody fees and costs, fees of appointed advisors and sub-managers, transaction costs and overseas regulatory costs.

Offshore investment will be made subject to any/ all approvals/conditions thereof as may be stipulated by SEBI/ RBI/ other regulatory authorities. Boards of asset management companies (AMCs) and trustees shall exercise due diligence in making investment decisions as required under Regulation 25(2). They shall make a detailed analysis of risks and returns of investment in foreign securities and how these investments would be in the interest of investors. Investment must be made in liquid actively traded securities/instruments and such other types of securities/instruments as may be permitted by SEBI from time to time. Boards of AMCs and trustees may prescribe detailed parameters for making such investments, which may include identification of countries, country rating, country limits, etc. They shall satisfy themselves that the AMC has experienced key personnel, research facilities and infrastructure for making such investments. Other specialised agencies and service providers associated with such investments e.g. custodian, bank, advisors, etc should also have adequate expertise and infrastructure facilities. Their past track record of performance and regulatory compliance record, if they are registered with foreign regulators, may also be considered. Necessary agreements may be entered into with them as considered necessary. All investment decisions shall be recorded in accordance with SEBI circular dated July 27, 2000. Such investments shall be disclosed while disclosing half-yearly portfolios in the prescribed format by making a separate heading "Foreign Securities/overseas ETFs." Scheme-wise percentage of investments made in such securities shall be disclosed while publishing half-yearly results in the prescribed format, as a footnote.

It is the investment manager's belief that overseas securities offer new investment and portfolio diversification opportunities into multi-market and multi-currency products. However, such investments also entail additional risks.

Investment in derivatives traded on recognised stock exchanges overseas shall be made only for hedging and portfolio balancing with underlying as securities. The schemes shall not invest in foreign securitised debts.

INVESTMENT IN SECURITISED DEBT

1. How the risk profile of securitized debt fits into the risk appetite of the scheme

Securitization is the fact or process of securitizing assets i.e. the conversion of loans into securities, usually in order to sell them on to other investors. This is done by assigning the loans to a special purpose vehicle (a trust), which in turn issues Pass-Through-Certificates (PTCs). These PTCs are transferable

securities with fixed income characteristics. The risk of investing in securitized debt is similar to investing in debt securities. However it differs mainly in two respects. One, the liquidity of securitized debt is less than similar debt securities. Two, for certain types of securitized debt (backed by mortgages, personal loans, credit card debt, etc.), there is an additional pre-payment risk. Pre-payment risk refers to the possibility that loans are repaid before they are due, which may reduce returns if the re-investment rates are lower than initially envisaged.

Because of these additional risks, securitized debt typically offers higher yields than debt securities of similar credit rating and maturity. After considering these additional risks, the investment is no different from investment in a normal debt security. Considering the investment objective of the scheme, these instruments with medium risk profile can be considered in the investment universe. Thus if the Fund Manager judges that the additional risks are suitably compensated by the higher returns, he may invest in securitized debt up to the limits specified in the asset allocation table.

2. Policy relating to originators based on nature of originator, track record, NPAs, losses in earlier securitized debt, etc

Investments in securitized debt will be done based on the assessment of the originator and the securitized debt which is carried out by the Fixed Income team based on the in-house research capabilities as well as the inputs from the independent credit rating agencies and by following Franklin Templeton's internal credit process.

Specifically, in order to mitigate the risk at the issuer/originator level the Fixed Income team will consider various factors which will include -

- Track record of the originator in the specific business to which the underlying loans correspond to;
- size and reach of the issuer/originator;
- Collection infrastructure & collection policies;
- Post default recovery mechanism & infrastructure;
- Underwriting standards & policies followed by originator;
- Management information systems;
- Financials of the originators including an analysis of leverage, NPAs, earnings, etc.;
- Future strategy of the company for the specific business to which the underlying loans correspond to;
- Performance track record of Originator's portfolio & securitized pools, if any;
- Utilization of credit enhancement in the prior securitized pools;
- The quality of information disseminated by the issuer/ originator; and
- The credit enhancement for different types of issuer/originator.

Also, assessment of business risk would be carried out which includes -

- Outlook for the economy (both domestic and global); and
- Outlook for the industry

In addition, the fund analyses the specific pool and the broad evaluation parameters are as follows:

- Average seasoning of the loans in the pool
- Average Loan to value ratio of the loans in the pool
- Average ticket size of the loans
- Borrower profile (salaried / self employed, etc)
- Geographical profile of the pool
- Tenure profile of the pool
- Obligor concentration
- Credit enhancement cover available over and above the historic losses on Originator's portfolio
- Expected Prepayment rate in the specific asset class experienced by the originator in the past as well as the industry
- Limited Liquidity and Price Risk.

The scheme will invest in securitized debt which are rated investment grade and above by a credit rating agency recognized by SEBI. The investment team analyses the Rating Rationale in detail before investing in any PTCs, and also discusses with the concerned rating agency on a need basis. The rating agency would normally take in to consideration the following factors while rating a securitized debt:

- Credit risk at the asset/originator/portfolio/pool level
 - The quality of the pool is a crucial element in assessing credit risk. In the Indian context, generally, pools are 'cherry-picked' using positive selection criteria. To protect the investor from

adverse selection of pool contracts, the rating agencies normally take into consideration pool characteristics such as pool seasoning (seasoning represents the number of instalments paid by borrower till date: higher seasoning represents better quality), over dues at the time of selection and Loan to Value (LTV). To assess its risk profile vis-à-vis the overall portfolio, the pool is analysed with regard to geographical location, borrower profile, LTV, and tenure.

- Counterparty risk
 - This includes Servicer Risk, co-mingling risk etc. The rating agencies generally mitigate such risks through the usage of stringent counterparty selection and replacement criteria to reduce the risk of failure.
- Bankruptcy risk
 - Of the Originator –
 - Normally, specific care is taken in structuring the securitization transaction so as to minimize the risk of the sale to the trust not being construed as a 'true sale'. It is also in the Interest of the originator to demonstrate the transaction as a true sell to get the necessary revenue recognition and tax benefits.
 - Of the Investors' agent
 - All possible care is normally taken in structuring the transaction and drafting the underlying documents so as to provide that the assets/receivables if and when held by Investor's Agent is held as agent and in Trust for the Investors and shall not form part of the personal assets of Investor's Agent.
- Legal risks
 - The rating agency normally conducts a detailed study of the legal documents to ensure that the investors' interest is not compromised and relevant protection and safeguards are built into the transaction.
 - Various market risks like interest rate risk, macro-economic risks
 - Assessment of risks related to business for example outlook for the economy, outlook for the industry and factors specific to the issuer/originator.

3. Risk mitigation strategies for investments with each kind of originator

The examples of securitized assets which may be considered for investment by the Scheme and the various risk mitigation parameters (please read in continuation with point 2 above) which will be considered include;

A) Asset backed securities issued by banks or non-banking finance companies.

Underlying assets may include receivables from loans against cars, commercial vehicles, construction equipment or unsecured loans such as personal loans, consumer durable loans. The various factors which will be usually considered while making investments in such type of securities include profile of the issuer, analysis of underlying loan portfolio – nature of asset class, seasoning of loans, geographical distribution of loans and coverage provided by credit-cum-liquidity enhancements.

B) Mortgage backed securities issued by banks or housing finance companies, where underlying assets are comprised of mortgages/home loan.

The various factors which will be usually considered while making investments in such type of securities include issuer profile of the issuer, quality of underlying portfolio, seasoning of loans, coverage provided by credit-cum-liquidity enhancements and prepayment risks.

C) Single loan securitization, where the underlying asset comprises of loans issued by a bank/non-banking finance company.

The factors which will be usually considered while making investments in such type of securities include assessment of credit risk associated with the underlying borrower as well as the originator. The Fixed Income team will adhere to the Franklin Templeton's internal credit process and perform a detailed review of the underlying borrower prior to making investments. This analysis is no different from the analysis undertaken by Fund when it invests in Debentures or Commercial papers issued by the same borrower.

Critical Evaluation Criteria

Typically the Fund would avoid investing in securitization transaction (without specific risk mitigation strategies / additional cash/security collaterals/ guarantees) if there are concerns on the following issues regarding the originator / underlying issuer:

1. High default track record/ frequent alteration of redemption conditions/covenants

2. High leverage ratios – both on a standalone basis as well on a consolidated level/ group level
3. Higher proportion of re-schedulement of underlying assets of the pool or loan, as the case may be
4. Higher proportion of overdue assets of the pool or the underlying loan, as the case may be
5. Poor reputation in market
6. Insufficient track record of servicing of the pool or the loan, as the case may be.

Further, investments in securitized debt will be done in accordance with the investment restrictions specified under the SEBI Regulations/ this Scheme Information Document which would help in mitigating certain risks. Currently, as per the Regulations, the Scheme cannot invest more than 10% of its net assets in debt instruments (irrespective of residual maturity) issued by a single issuer which are rated not below investment grade by a credit rating agency authorized to carry out such activity under the Act. Such investment limit may be extended to 12% of the net assets of the Scheme with the prior approval of the Board of Trustees and the Board of the AMC.

4. The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments

The framework which will generally be applied by the Fund Manager while evaluating the investment decision with respect to securitized debt will be as follows:

Characteristics/ Type of Pool	Mortgage Loan	Commercial Vehicle and Construction Equipment	CAR	2 wheelers	Micro Finance Pools	Personal Loans	Single Sell down \$	Others
Approximate Average maturity (in Months)	Upto 10 years	Upto 5 years	Upto 5 years	Upto 48 months	Upto 80 weeks	Upto 3 years	Case by case basis	As and when new asset classes of securitized debt are introduced, the investments in such instruments will be evaluated on a case by case basis
Collateral margin (including cash, guarantees, excess interest spread, subordinate tranche)	In excess of 3%	In excess of 4%	In excess of 4%	In excess of 4%	In excess of 5%	In excess of 5%	Case by case basis	
Average Loan to Value Ratio	95% or lower	100% or lower **	95% or lower	95% or lower	Unsecured	Unsecured	Case by case basis	
Average seasoning of the Pool	Minimum 2 months	Minimum 2 months	Minimum 2 months	Minimum 2 months	Minimum 2 weeks	Minimum 2 months	Case by case basis	
Maximum single exposure range *	< 5%	< 5%	NA (retail pool)	NA (retail pool)	NA (Very Small retail pool)	NA (retail pool)	Not applicable	
Average single exposure range % *	< 5%	< 5%	< 2%	< 1%	< 1%	< 1%	Not applicable	

* denotes % of a single ticket/loan size to the overall assets in the securitized pool.

** LTV Based on chassis value

\$ Broad evaluation criteria as per point 3 above

Notes:

1. Retail pools are the loan pools relating to Car, 2 wheeler, micro finance and personal loans, wherein the average loan size is relatively small and spread over large number of borrowers.

2. The information illustrated in the table above is based on current scenario relating to securitized debt market and is subject to change depending upon the change in the related factors.

In addition to the framework stated in the table above, in order to mitigate the risks associated with the underlying assets where the diversification is less, at the time of investment the Fixed Income team could consider various factors including but not limited to -

- Size of the loan - the size of each loan is generally analysed on a sample basis and an analysis of the static pool of the originator is undertaken to ensure that the same matches with the static pool characteristics. It also indicates whether there is high reliance on very small ticket size borrower which could result in delayed and expensive recoveries.
- Average original maturity of the pool of underlying assets
- The analysis of average maturity of the pool is undertaken to evaluate whether the tenor of the loans are generally in line with the average loans in the respective industry and repayment capacity of the borrower.
- Loan to value ratio, average seasoning of the pool of underlying assets - these parameters would be evaluated based on the asset class as mentioned in the table above.
- Default rate distribution - the Fixed Income team generally ensures that all the contracts in the pool are current to ensure zero default rate distribution.
- Geographical distribution - the analysis of geographical distribution of the pool is undertaken to ensure prevention of concentration risk.
- Credit enhancement facility - credit enhancement facilities in the form of cash collateral, such as fixed deposits, bank guarantee etc could be obtained as a risk mitigation measure.
- Liquidity facility - these parameters will be evaluated based on the asset class as mentioned in the table above.
- Structure of the pool of underlying assets - The structure of the pool of underlying assets would be either single asset class or combination of various asset classes as mentioned in the table above. We could add new asset class depending upon the securitization structure and changes in market acceptability of asset classes.

5. Minimum retention period of the debt by originator prior to securitization

The minimum retention period of the debt by the originator prior to securitization and the minimum retention percentage by originator of debts will be as per the guidelines/regulations issued by the RBI/other regulatory agencies from time to time. Also, please refer the table in point 4. The Fund will adopt that policy, whichever is stricter.

6. Minimum retention percentage by originator of debts to be securitized

Same as point 5 above.

7. The mechanism to tackle conflict of interest when the mutual fund invests in securitized debt of an originator and the originator in turn makes investments in that particular scheme of the fund

An investment by the scheme in any security is done after detailed analysis by the Fixed Income team and in accordance with the investment objectives and the asset allocation pattern of a scheme. All investments are made on an arms length basis without consideration of any investments (existing/potential) in the schemes made by any party related/involved in the transaction. The robust credit process ensures that there is no conflict of interests when a scheme invests in securitized debt of an originator and the originator in turn makes investments in that particular scheme.

8. The resources and mechanism of individual risk assessment with the AMC for monitoring investment in securitized debt

The resources for and mechanisms of individual risk assessment with the AMC for monitoring investment in securitized debt are as follows:

- Fixed Income Team – Currently, the AMC has a 8 member team, which is responsible for credit research and monitoring and fund management, for all exposures including securitized debt.
- Ratings are monitored for any movement – Based on the cash flow report and Fixed Income Team's view, periodic review of utilization of credit enhancement shall be conducted and ratings shall be monitored accordingly.

PORTFOLIO TURNOVER

Portfolio turnover is defined as lesser of purchases and sales as a percentage of the average corpus of the Scheme during a specified period of time. Portfolio turnover in the scheme will be a function of market opportunities. The scheme is an open-end scheme. It is expected that there would be a number of subscriptions and repurchases on a daily basis. Consequently it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio. The AMC will endeavour to optimise portfolio turnover to optimise risk adjusted return keeping in mind the cost associated with it. A high portfolio turnover rate is not necessarily a drag on portfolio performance and may be representative of arbitrage opportunities that exist for securities held in the portfolio rather than an indication of change in AMC's view on a security etc. However, the AMC will take advantage of the opportunities that present themselves from time to time because of the inefficiencies in the securities markets.

Scheme	Plans and Options
Franklin India Dynamic Accrual Fund (FIDA)	Growth Plan Dividend Plan (with Reinvestment and Payout Options) Direct – Growth Plan Direct - Dividend Plan (with Reinvestment and Payout Options).

For sake of clarity and ease of understanding, these Plans may be referred as Regular – Growth Plan and Regular – Dividend Plan in various advertisements and literatures.

Growth Plan / Direct – Growth Plan

Under the Growth Plan / Direct- Growth Plan, the returns to investors will be available in the form of capital appreciation. There will be no dividend declaration under this option. Instead the growth in NAV will reflect the appreciation of the value of investment.

Dividend Plan / Direct – Dividend Plan

Under the Dividend Option / Direct – Dividend Option, it is proposed to distribute the returns to the investors in the form of dividends out of distributable surplus. The AMC/Trustee may, at their discretion, approve the distribution of dividends out of distributable surplus to unit holders in the Dividend Option / Direct – Dividend Option whose names appear in the Register of Unit holders on the record date. Investors have the option of reinvesting the dividend (Dividend Reinvestment) or receiving cash payouts (Dividend Payout).

Dividend Payout Option:

A Unitholder opting for the Dividend Plan / Direct – Dividend Plan may choose to receive cash payouts of the dividend amount. Please note that where the Unitholder has opted for Dividend Payout option / Direct – Dividend Payout option and in case the amount of dividend payable to the Unitholder is Rs.20/- or less, the same will be **compulsorily reinvested in the Scheme**.

Dividend Reinvestment Option:

A Unitholder opting for the Dividend Plan / Direct – Dividend Plan may choose to reinvest the dividend to be received in additional units of the scheme. The dividend due and payable to the unit holder will be automatically reinvested at the NAV of the immediately following Business Day. In case of Daily Dividend Plan / Direct – Daily Dividend Plan, dividend declared shall be automatically reinvested back into the Plan at the first NAV prevailing after the dividend is distributed. The dividend so reinvested shall be construed as payment of dividends to the unit holder and construed as receipt of the same amount from each unit holder for reinvestment in units.

On reinvestment of dividends, the number of units to the credit of unit holder will increase to the extent of the dividend reinvested divided by the NAV applicable on the day of reinvestment, as explained above.

Direct investments

All applications directly received by Franklin Templeton Asset Management (India) Pvt. Ltd., the AMC, at any Official Point of Acceptance of Transactions i.e. applications which are not routed through any AMFI registered mutual fund distributor, shall be treated as investments made under the **Direct route and the Units shall be allotted in Direct**.

DEFAULT PLAN/OPTION

The investors must clearly indicate the Plan and Option (Growth or Dividend / Reinvestment or Payout) in the relevant space provided for in the Application Form. In the absence of such instruction, it will be assumed that the investor has opted for the **Default Plan** which shall be **Direct Plan** (for investments not routed through a AMFI registered mutual fund distributor) and **Default Option**, which is **Dividend**

Reinvestment.

The Trustee / AMC reserve the right to alter / vary the default plan / option, after giving notice.

The Trustees may declare dividends at any periodicity as it deems fit to the Unitholders in the Dividend Plan, whose names appear on the Unitholders' register on the record date.

The scheme reserves the right to suspend sale of units for such period of time as it deems necessary before the record date to ensure proper processing.

Dividends will be distributed within 30 days of the declaration of the dividends.

Dividends will be paid by cheque, net of taxes as may be applicable, and payments will be in favour of the Unitholder's registered name or, if there is more than one registered holder, of the first-named registered holder on the original Application Form. To safeguard the interest of Unitholders from loss or theft of dividend cheques, investors are encouraged to provide the details of their bank account in the Application Form. Dividend cheques will be sent in accordance with such information. The Trustee may not declare a dividend at all in the event of inadequacy of distributable income. There is no assurance or guarantee to Unitholders as to the periodicity of dividend; rate of dividends distribution nor that dividend will be regularly paid. Applications without such documents and information may be rejected.

In terms of SEBI circulars dated April 27, 2007, April 03, 2008 and June 30, 2008 read with SEBI letter dated June 25, 2007, **Permanent Account Number (PAN) would be the sole identification number for all participants transacting in the securities market, irrespective of the amount of transaction**, except (a) investors residing in the state of Sikkim; (b) Central Government, State Government, and the officials appointed by the courts e.g. Official liquidator, Court receiver etc. (under the category of Government) and (c) investors participating only in micro-pension. SEBI, in its subsequent letter dated July 24, 2012 has conveyed that investments in mutual fund schemes [including investments through Systematic Investment Plan (SIP)] of up to Rs.50,000/- per year per investor shall be exempted from the requirement of PAN.

Accordingly, where the aggregate of lump sum investment (fresh purchase and additional purchase) and SIP instalments by an investor in a rolling 12 months period or in a financial year i.e., April to March does not exceed Rs.50,000/- (referred to as "Micro investment"), it shall be exempt from the requirement of PAN. However, a duly verified/attested copy of such document(s) as may be prescribed by the AMC/Trustee from time to time, needs to be submitted as the proof of identification in lieu of PAN Card copy.

This exemption will be available only to Micro investment made by individuals being Indian citizens (including NRIs, joint holders, minors acting through guardian and sole proprietary firms). PIOs, HUFs, QFIs and other categories of investors will not be eligible for this exemption.

For the purpose of identifying Micro investment, applications shall be aggregated at the investor level (same sole holder/joint holders in the same sequence) and such aggregation shall be done irrespective of the number of folios / accounts under which the investor is investing and irrespective of source of funds, mode, location and time of application and payment.

Thus, submission of PAN is mandatory for all existing as well as prospective investors (including all joint applicants/holders, guardians in case of minors, POA holders and NRIs but except for the categories mentioned above) for investing with mutual funds from this date. Investors are required to register their PAN with the Mutual Fund by providing the PAN card copy.

All investments in Franklin Templeton Mutual Fund need to comply with the PAN and KYC requirements as stated above, failing which the applications are liable to be rejected. It is clarified that all categories of investors seeking exemption from PAN still need to complete the KYC requirements stipulated by the AMC/Trustee from time to time, irrespective the amount of investment.

In case of SIP, the units will be allotted based on the applicable NAV as per the terms of the Scheme Information Document of the respective scheme and will be credited to the investor's demat account on weekly basis on realisation of funds. For example, if the "Applicable NAV for Redemption" (rounded) is Rs.12.3269 and the exit load applied is 0.5%, the redemption price will be calculated as follows:

Redemption Price	=	Applicable NAV for Redemption * (1- Exit Load)
	=	12.3269 * (1-0.005)
	=	Rs.12.26526550

Redemption requests will be honoured to the extent permitted by the credit balance in the Unitholder's account. The number of Units so redeemed will be subtracted from the Unitholder's account and a statement to this effect will be issued to the Unitholder. If the redemption request exceeds the Balance in the account then the account would be closed and balance sent to the investors. An SWP may be terminated on appropriate written notice by the unitholder of the fund, and it may terminate automatically if all the units are liquidated or withdrawn from the account, or upon the Fund's receipt of notification of death or incapacity of the unitholder.

The Investment Manager may change rules relating to the facility from time to time.
