I. INTRODUCTION

A. RISK FACTORS

■ Standard Risk Factors:

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down depending on the various factors and forces affecting the capital markets and money markets.
- Past performance of the Sponsors and their affiliates/ AMC/ Mutual Fund does not guarantee future performance of the Scheme of the Mutual Fund.
- The name of the Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The Sponsors are not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs. 1 lakh each made by them towards setting up the Fund.
- The present Scheme is not guaranteed or assured return scheme.

■ Scheme Specific Risk Factors

Some of the specific risk factors related to the Scheme include, but are not limited to the following:

(i) Risk factors associated with investing in equities and equity related instruments

- Equity shares and equity related instruments are volatile and prone to price fluctuations on a daily basis. Investments in equity shares and equity related instruments involve a degree of risk and investors should not invest in the Scheme unless they can afford to take the risks.
- Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges. Investment in such securities may lead to increase in the scheme portfolio risk.
- While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges and may lead to the Scheme incurring losses till the security is finally sold.

(ii) Risk factors associated with investing in Fixed Income Securities

- The Net Asset Value (NAV) of the Scheme, to the extent invested in Debt and Money Market instruments, will be affected by changes in the general level of interest rates. The NAV of the Scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- Money market instruments, while fairly liquid, lack a well developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is finally sold.
- Investments in money market instruments involve credit risk commensurate with short term rating of the issuers.
- Investment in Debt instruments are subject to varying degree of credit risk or default (i.e. the risk of an issuer's inability to meet interest or principal payments on its obligations) or any other issues, which may have their credit ratings downgraded. Changes in financial conditions

of an issuer, changes in economic and political conditions in general, or changes in economic or and political conditions specific to an issuer, all of which are factors that may have an adverse impact on an issuer's credit quality and security values. The Investment Manager will endeavour to manage credit risk through in-house credit analysis. This may increase the risk of the portfolio. The Investment Manager will endeavour to manage credit risk through in-house credit analysis.

- Government securities where a fixed return is offered run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. The new level of interest rate is determined by the rates at which government raises new money and/or the price levels at which the market is already dealing in existing securities. The price-risk is not unique to Government Securities. It exists for all fixed income securities. However, Government Securities are unique in the sense that their credit risk generally remains zero. Therefore, their prices are influenced only by movement in interest rates in the financial system.
- Different types of fixed income securities in which the Scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the Scheme risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher level of risk than Government securities. Further even among corporate bonds, AAA rated bonds are comparatively less risky than AA rated bonds.
- The AMC may, considering the overall level of risk of the portfolio, invest in lower rated / unrated securities offering higher yields as well as zero coupon securities that offer attractive yields. This may increase the absolute level of risk of the portfolio.
- As zero coupon securities do not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in interest rates and are subject to issuer default risk. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer attractive yields. This may increase the risk of the portfolio. Zero coupon or deep discount bonds are debt obligations that do not entitle the holder to any periodic payment of interest prior to maturity or a specified date when the securities begin paying current interest and therefore, are generally issued and traded at a discount to their face values. The discount depends on the time remaining until maturity or the date when securities begin paying current interest. It also varies depending on the prevailing interest rates, liquidity of the security and the perceived credit risk of the Issuer. The market prices of zero coupon securities are generally more volatile than the market prices of securities that pay interest periodically.
- Scheme's performance may differ from the benchmark index to the extent of the investments held in the debt segment, as per the investment pattern indicated under normal circumstances.
- **Prepayment Risk:** Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the Scheme to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the Scheme.

- **Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
- **Settlement risk:** Different segments of Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are uninvested and no return is earned thereon. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio, due to the absence of a well developed and liquid secondary market for debt securities, may result at times in potential losses to the Scheme in the event of a subsequent decline in the value of securities held in the Scheme's portfolio.
- The Scheme at times may receive large number of redemption requests, leading to an asset-liability mismatch and therefore, requiring the investment manager to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments.

(iii) General Risk factors

- Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. The NAV of the Units of the Scheme can go up or down because of various factors that affect the capital markets in general.
- As the liquidity of the investments made by the Scheme could, at times, be restricted by trading volumes and settlement periods, the time taken by the Mutual Fund for redemption of Units may be significant in the event of an inordinately large number of redemption requests or restructuring of the Scheme. In view of the above, the Trustee has the right, in its sole discretion, to limit redemptions (including suspending redemptions) under certain circumstances, as described on **Page 41** under **Right to Restrict Redemption and / or Suspend Redemption of the units.**
- At times, due to the forces and factors affecting the capital market, the Scheme may not be able to invest in securities falling within its investment objective resulting in holding the monies collected by it in cash or cash equivalent or invest the same in other permissible securities / investments amounting to substantial reduction in the earning capability of the Scheme. The Scheme may retain certain investments in cash or cash equivalents for its day-to-day liquidity requirements.
- Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. The AMC may choose to invest in unlisted securities that offer attractive returns. This may increase the risk of the portfolio.
- Investment strategy to be adopted by the Scheme may carry the risk of significant variance between the portfolio allocation of the Scheme and the Benchmark particularly over a short to medium term period.

- Performance of the Scheme may be affected by political, social, and economic developments, which may include changes in government policies, diplomatic conditions, and taxation policies.

(iv) Risk factors associated with investing in Foreign Securities

- **Currency Risk:**
Moving from Indian Rupee (INR) to any other currency entails currency risk. To the extent that the assets of the Scheme will be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by changes in the value of certain foreign currencies relative to the Indian Rupee.
- **Interest Rate Risk:**
The pace and movement of interest rate cycles of various countries, though loosely co-related, can differ significantly. Hence by investing in securities of countries other than India, the Scheme stand exposed to their interest rate cycles.
- **Credit Risk:**
Investment in Foreign Debt Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer. This is substantially reduced since the SEBI (MF) Regulations stipulate investments only in debt instruments with rating not below investment grade by accredited/registered credit rating agency.
- **Taxation Risk:**
In addition to the disclosure related to taxation mentioned under section "**Special Consideration**" on **Page 8**, Investment in Foreign Securities poses additional challenges based on the tax laws of each respective country or jurisdiction. The scheme may be subject to a higher level of taxes than originally anticipated and or dual taxation.
The Scheme may be subject to withholding or other taxes on income and/or gains arising from its investment portfolio. Further, such investments are exposed to risks associated with the changing / evolving tax / regulatory regimes of all the countries where the Scheme invests. All these may entail a higher outgo to the Scheme by way of taxes, transaction costs, fees etc. thus adversely impacting its NAV; resulting in lower returns to an Investor.
- **Legal and Regulatory Risk:**
Legal and regulatory changes could occur during the term of the Scheme which may adversely affect it. If any of the laws and regulations currently in effect should change or any new laws or regulations should be enacted, the legal requirements to which the Scheme and the investors may be subject could differ materially from current requirements and may materially and adversely affect the Scheme and the investors. Legislation/ Regulatory guidelines could also be imposed retrospectively.
- **Country Risk:**
The Country risk arises from the inability of a country, to meet its financial obligations. It is the risk encompassing economic, social and political conditions in a foreign country, which might adversely affect foreign investors' financial interests. In addition, country risks would include events such as introduction of extraordinary exchange controls, economic deterioration, bi-lateral conflict leading to immobilisation of the overseas financial assets and the prevalent tax laws of the respective jurisdiction for execution of trades or otherwise.

- To manage risks associated with foreign currency and interest rate exposure, the Mutual Fund may use derivatives for efficient portfolio management including hedging and in accordance with conditions as may be stipulated by SEBI/ RBI from time to time.

(v) Risk factors associated with investing in Derivatives

- The AMC, on behalf of the Scheme may use various derivative products, from time to time, in an attempt to protect the value of the portfolio and enhance Unit holders' interest. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Other risks include, the risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.
- The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.
- **Credit Risk:**
The credit risk in derivative transaction is the risk that the counter party will default on its obligations and is generally low, as there is no exchange of principal amounts in a derivative transaction.
- **Illiquidity risk:**
This is the risk that a derivative cannot be sold or purchased quickly enough at a fair price, due to lack of liquidity in the market.

(vi) Risk factors associated with Securities Lending

As with other modes of extensions of credit, there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary.

(vii) Risk factors associated with investing in Securitised Debt

The Risks involved in Securitised Papers described below are the principal ones and does not represent that the statement of risks set out hereunder is exhaustive.

- **Limited Liquidity & Price Risk**
There is no assurance that a deep secondary market will develop for the Certificates. This could limit the ability of the investor to resell them.
- **Limited Recourse, Delinquency and Credit Risk**
The Credit Enhancement stipulated represents a limited loss cover to the Investors. These Certificates represent an undivided beneficial interest in the underlying receivables

and do not represent an obligation of either the Issuer or the Seller or the originator, or the parent or any affiliate of the Seller, Issuer and Originator. No financial recourse is available to the Certificate Holders against the Investors' Representative. Delinquencies and credit losses may cause depletion of the amount available under the Credit Enhancement and thereby the Investor Payouts to the Certificate Holders may get affected if the amount available in the Credit Enhancement facility is not enough to cover the shortfall. On persistent default of a Obligor to repay his obligation, the Servicer may repossess and sell the Asset. However many factors may affect, delay or prevent the repossession of such Asset or the length of time required to realise the sale proceeds on such sales. In addition, the price at which such Asset may be sold may be lower than the amount due from that Obligor.

- **Risks due to possible prepayments and Charge Offs**

In the event of prepayments, investors may be exposed to changes in tenor and yield. Also, any Charge Offs would result in the reduction in the tenor of the Pass Through Certificates (PTCs).

- **Bankruptcy of the Swap Bank**

If the Swap Bank, becomes subject to bankruptcy proceedings then an Investor could experience losses or delays in the payments due under the Interest Rate Swap Agreement.

- **Risk of Co-mingling**

With respect to the Certificates, the Servicer will deposit all payments received from the Obligor into the Collection Account. However, there could be a time gap between collection by a Servicer and depositing the same into the Collection account especially considering that some of the collections may be in the form of cash. In this interim period, collections from the Loan Agreements may not be segregated from other funds of originator. If originator in its capacity as Servicer fails to remit such funds due to Investors, the Investors may be exposed to a potential loss.

(viii) Risk factors associated with processing of transaction through Stock Exchange Mechanism

The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognised stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing/settlement, etc. upon which the Fund has no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s).

These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macro economic conditions and RBI policy. The price and yield on various debt instruments fluctuate from time to time depending upon the macro economic situation, inflation rate, overall liquidity position, foreign exchange scenario etc. Also, the price and yield vary according to maturity profile, credit risk etc.

Generally, for instruments issued by a non-Government entity (corporate / PSU bonds), the yield is higher than the yield on a Government Security with corresponding maturity. The difference, known as credit spread, depends on the credit rating of the entity.

Overseas Debt Market

The nature and number of debt instruments available in international debt markets is very wide. In terms of diverse instruments as well as liquidity, overseas debt markets offer great depth and are extremely well developed.

Investment in international debt greatly expands the universe of top quality debt, which is no longer restricted to the limited papers available in the domestic debt market. The higher rated overseas sovereign, quasi-government and corporate debt offer lower default risk in addition to offering a high degree of liquidity since these are traded across major international markets. Investments in rated international debt offer multiple benefits of risk reduction, a much wider universe of top quality debt and also potential gains from currency movements.

Investments in international markets are most often in U.S. dollars, though the Euro, Pound Sterling and the Yen are also major currencies. Though this market is geographically well spread across global financial centres, the markets in the U.S., European Union and London offer the most liquidity and depth of instruments.

Besides factors specific to the country / issuer, international bond prices are influenced to a large extent by a number of other factors; chief among these are the international economic outlook, changes in interest rates in major economies, trading volumes in overseas markets, cross currency movements among major currencies, rating changes of countries / corporations and major political changes globally.

The approximate yields to maturity in the US Bond Market as at March 31, 2017 are as follows

Maturity	US Treasury yields (%)
3 months	0.76
6 months	0.91
2 years	1.27
3 years	1.50
5 years	1.93
10 years	2.40

Towards this end, the Mutual Fund may also appoint overseas investment advisors and other service providers, as and when permissible under the regulations. The appointment of such intermediaries shall be in accordance with the applicable requirements of SEBI and within the permissible ceilings of expenses as stated under Regulation 52 of SEBI (MF) Regulations.

■ Investment in Securitised Debt

A securitisation transaction involves sale of receivables by the originator (a bank, non-banking finance company, housing finance company, or a manufacturing/service company) to a Special Purpose Vehicle (SPV), typically set up in the form of a trust. Investors are issued rated Pass Through Certificates (PTCs), the proceeds of which are paid as consideration to the originator. In this manner, the originator, by selling his loan receivables to an SPV, receives consideration from investors much before the maturity of the underlying loans. Investors are paid from the collections of the underlying loans from borrowers. Typically, the transaction is provided with a limited amount of credit enhancement (as stipulated by the rating agency for a target rating), which provides protection to investors against defaults by the underlying borrowers.

Generally available asset classes for securitisation in India are:

- Commercial vehicles
- Auto and two wheeler pools
- Mortgage pools (residential housing loans)
- Personal loan, credit card and other retail loans
- Corporate loans/receivables

Investment / Risk Mitigation Strategy

1. Risk profile of securitised debt vis-à-vis risk appetite of the Scheme(s)

The risk profile of securitised debt is generally at par with the risk profile of other debt securities at the same level of credit rating. Securitised debt offers additional income (spread) over a debt security of similar rating and maturity, which enables the scheme to optimize its income without taking any additional credit risk. Securitised debt is generally less liquid, however, investment in securitised debt is made to maintain a diversified portfolio of debt securities that optimizes return without increasing the overall risk profile of the Scheme.

2. Policy relating to originators based on nature of originator, track record, NPAs, losses in earlier securitised debt, etc

The originator is an entity (like banks, non-banking finance companies, corporates etc), which has initially provided the loan & is also generally responsible for servicing the loans. The schemes will invest in securitised debt of originators with at least investment grade credit rating and established track

record. A detailed evaluation of originator is done before the investment is made in securitised debt of any originator on various parameters given below:

- **Track record**

The investment in securitised debt is done based on origination and underwriting process and capabilities of the originator, overview of corporate structure, group to which they belong, experience of the company in the business & how long they have been in the business, financial condition of the company, credit rating, past performance of similar pools by the originator, etc.

- **Willingness to pay through credit enhancement facilities etc.**

Credit enhancement is provided by the originator, as indicated by rating agencies, so as to adequately cover the defaults and acts as a risk mitigation measure. The size of the credit enhancement as indicated by rating agency depends on the originator's track record, past delinquencies, pattern of the portfolio & characteristics of the pool vis-a-vis of the portfolio, nature of the asset class.

- **Ability to pay**

The quality of the origination impacts the performance of the underlying asset & thus originators with strong systems and processes in place can eliminate poor quality assets. A robust risk management system of the originator and availability of MIS reports on timely basis, results in creation of strong asset portfolio.

- **Business Risk Assessment**

The business risk assessment of originator / underlying borrower also includes detailed credit assessment wherein following factors are also considered:

- Outlook for the economy (domestic and global)
- Outlook for the industry
- Company specific factors

In addition, a detailed review and assessment of rating rationale is done along with interactions with the company as well as the rating agency. All investment in securitised debt is done after taking into account, the Critical Evaluation Parameters (for pool loan and single loan securitisation transactions) regarding the originator / underlying issuer as mentioned below:

- Default track record/ frequent alteration of redemption conditions / covenants
- High leverage ratios of the ultimate borrower (for single-sell downs) - both on a standalone basis as well on a consolidated level/ group level

- Higher proportion of reschedulement of underlying assets of the pool or loan, as the case may be
- Higher proportion of overdue assets of the pool or the underlying loan, as the case may be
- Poor reputation in market
- Insufficient track record of servicing of the pool or the loan, as the case may be.

3. Risk mitigation strategies for investments with each kind of originator

Investments are based on assessment of following parameters, so as to mitigate risk associated with such investment:

- Credit quality, size and reach of the originator
- Nature of receivables/asset category i.e. cars, construction equipment, commercial vehicles, personal loans etc.
- Collection process, infrastructure and follow-up mechanism
- Quality of MIS
- Credit cum liquidity enhancement
- Credit appraisal norms of originator
- Asset Quality - portfolio delinquency levels
- Past performance of rated pools
- Pool Characteristics - seasoning, Loan-to-value ratios, geographic diversity etc.

4. The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments

Diversification of underlying assets is achieved through a) prudent mix of asset categories - i.e. cars (new, used), commercial vehicles, construction equipment, unsecured loans to individuals or small & medium enterprises b) total number of contracts in a pool c) average ticket size of loans and d) geographical distribution.

Risk mitigation measures for less diversified investments in pools is accomplished through the size of credit enhancement, seasoning or loan to value ratios.

Illustrative framework, which will be applied while evaluating investment decision relating to a pool securitisation transaction:

Characteristics/ Type of Pool	Mortgage Loan	Commercial Vehicle and Construction Equipment	Car	2 wheelers	Micro Finance Pools	Personal Loans	Single Sell Downs	Others
Approximate Average maturity (in Months)	NA	12-60 months	12-60 months	8-40 months	NA	NA	Refer Note A	Refer Note B
Collateral margin (including cash, guarantees, excess interest spread, subordinate tranche)	NA	5% - 20%	4- 15%	4-15%	NA	NA		
Average Loan to Value Ratio	NA	80-95%	70-90%	70-95%	NA	NA		
Average seasoning of the Pool	NA	3-8 months	3-8 months	2-5 months	NA	NA		
Maximum single exposure range	NA	3-7%	NA (Retail pool)	NA (Retail Pool)	NA	NA		
Average single exposure range %	NA	1-5%	0-1%	0-1%	NA	NA		

NA - Not Applicable

Information in the table above is based on current scenario and is subject to change depending upon the change in related factors.

Notes:

- A. In case of securitised debt with underlying being single loan, the investment limit applicable to the underlying borrower is considered.
- B. Other investment will be decided on a case to case basis.

In case of asset backed pools (ABS), evaluation of the pool assets is done considering the following factors: (Refer the table above which illustrates the averages of parameters considered while selecting the pool)

- Size of the loan
- Average original maturity of the pool
- Loan to Value Ratio
- Average seasoning of the pool
- Default rate distribution
- Geographical Distribution
- Credit enhancement facility
- Liquid facility
- Structure of the pool

5. Minimum retention period of the debt by originator prior to securitisation

The illustrative average seasoning of the debt by originator prior to securitisation is given above in table (Refer Point 4).

Minimum retention period of the debt by originator prior to securitisation in the case of asset pools is in the form of seasoning of loans to various asset classes (cars, commercial vehicles, etc.) and generally varies from one month to six months depending on the nature of asset.

6. Minimum retention percentage by originator of debts to be securitised

While minimum retention percentage by originator is not prescribed, any amount retained by the originator through subordination is viewed positively at the time of making investment and generally varies from 5% to 10%.

7. The mechanism to tackle conflict of interest when the mutual fund invests in securitised debt of an originator and the originator in turn makes investments in that particular scheme of the fund

All proposals for investment in securitised debt are evaluated by the credit analyst based on several parameters such as nature of underlying asset category, pool characteristics, asset quality, credit rating of the securitisation transaction, and credit cum liquidity enhancement available. Investment in securitised debt in any scheme is made by the respective fund manager in line with the investment objective of that scheme.

8. The resources and mechanism of individual risk assessment with the AMC for monitoring investment in securitised debt (in general)

Investment in securitised debt is monitored regularly with regards to its performance on various parameters such as collection efficiency, delinquencies, prepayments and utilization of credit enhancement. Information on these parameters is available through monthly reports from Pool Trustees and through information disseminated by the rating agencies. Monthly performance report is released by the credit analyst to the fund management team and the fund management team periodically reviews the same.

■ Trading in Derivatives

The Scheme may take derivatives position based on the opportunities available subject to the guidelines provided by SEBI from time to time and in line with the overall investment objective of the Scheme. The Fund has to comply with the prescribed disclosure requirements. These may be taken to hedge the portfolio, rebalance the same or to undertake any other strategy as permitted under SEBI (MF) Regulations from time to time. Hedging does not mean maximisation of returns but only reduction of systematic or market risk inherent in the investment. The Scheme intend to take position in derivative instruments like Futures, Options, Interest Rate Swaps, Forward Rate Agreements and such other derivative instruments as may be permitted by SEBI from time to time.

The Scheme intend to use derivatives mainly for the purpose of hedging and portfolio balancing. Losses may arise as a result of using derivatives, but these are likely to be compensated by the gains on the underlying cash instruments held by the Scheme. The Scheme will not assume any leveraged exposure to derivatives.

Pursuant to SEBI Circular No. DNP/Cir-29/2005 dated September 14, 2005, the Scheme(shall be treated as Trading Members at par with a registered FII in respect of position limits in index futures, index options, stock options and stock futures contracts.

Derivatives can be traded over the exchange or can be structured between two counter-parties. Those transacted over the exchange are called Exchange Traded derivatives whereas the other category is referred to as OTC (Over the Counter) derivatives.

The maximum limit for each derivative position is as under:

Sr.	Derivative	Action	Description	Limit
1	Index futures	Buy	Buy futures against cash to protect against rising market	To the extent of cash / equivalents in the portfolio. Max. limit 10% of portfolio
2	Index Options - Call	Buy	Buy index calls against cash (existing /expected) to protect against rising market	To the extent of cash / equivalents in the portfolio. Max. limit 10% of portfolio
3	Stock futures	Buy	Buy against cash to protect against rising share prices	To the extent of cash / equivalents in the portfolio. Max. limit 10% of portfolio; per scrip limit 4%.
4	Stock futures	Sell	Sell against existing stock - Hedging against downside on existing stock in the face of expected volatility in the stock price	To the extent of the particular scrip holding in the portfolio; per scrip limit 10%.
5	Stock options - Call	Buy	Buy against cash to protect against rising share prices	To the extent of cash / equivalents in the portfolio. Max. limit 10% of portfolio; per scrip limit 4%
6	Stock options - Put	Buy	Purchase against existing stock. Hedging against downside on existing stock in the face of expected volatility in the stock price	To the extent of the particular scrip holding in the portfolio; per scrip limit 10%

Note : Per Scrip Limit disclosed above is as a % of the equity portfolio of the Scheme.

Position Limits

The position limits for trading in derivatives by Mutual Funds specified by SEBI vide SEBI Circular No. DNP/Cir-29/2005 dated September 14, 2005, SEBI Circular No. DNP/Cir -30/2006 dated January 20, 2006 and SEBI Circular No. SEBI/DNP/Cir-31/2006 dated September 22, 2006 are as follows:

Some of the differences of these two derivative categories are as under:

Exchange traded derivatives: These are quoted on the exchanges like any other traded asset class. The most common amongst these are the Index Futures, Index Options, Stock Futures and Options on individual equities / securities. The basic form of the futures contract is similar to that of the forward contract, a futures contract obligates its owner to purchase a specified asset at a specified exercise price on the contract maturity date. Futures are cash-settled and are traded only in organised exchanges. Exchange traded derivatives are standardised in terms of amount and delivery date. Standardisation and transparency generally ensures a liquid market together with narrower spreads. On the other hand, for delivery dates far in the future, there may be insufficient liquidity in the futures market whereas an OTC price may be available.

OTC derivatives: OTC derivatives require the two parties engaging in a derivatives transaction to come together through a process of negotiation. It is a derivative that is customised in terms of structure, amount, tenor, underlying assets, collateral etc. Some of the common examples are interest rate and currency swaps, Forward Rate Agreements (FRAs) etc.

Exposure to Derivatives

Please refer to **Page 16** for the details of maximum exposure to investment in Derivatives by the Scheme. The limits on derivatives exposure per scrip/instrument and derivatives positions and limits are as per the table below.

i. Position limit for Mutual Funds in index options contracts

- a. The Mutual Fund position limit in all index options contracts on a particular underlying index shall be Rs. 500 crore or 15% of the total open interest of the market in index options, whichever is higher, per Stock Exchange.

b. This limit would be applicable on open positions in all options contracts on a particular underlying index.

ii. Position limit for Mutual Funds in index futures contracts

a. The Mutual Fund position limit in all index futures contracts on a particular underlying index shall be Rs. 500 crore or 15% of the total open interest of the market in index futures, whichever is higher, per Stock Exchange.

b. This limit would be applicable on open positions in all futures contracts on a particular underlying.

iii. Additional position limit for hedging

In addition to the position limits at point (i) and (ii) above, Mutual Funds may take exposure in equity index derivatives subject to the following limits :

1. Short positions in index derivatives (short futures, short calls and long puts) shall not exceed (in notional value) the Mutual Fund's holding of stocks.
2. Long positions in index derivatives (long futures, long calls and short puts) shall not exceed (in notional value) the Mutual Fund's holding of cash, government securities, T-Bills and similar instruments.

iv. Position limit for Mutual Funds for stock based derivative contracts

v. Position limit for each scheme of a Mutual Fund

The scheme-wise position limit requirements shall be :

1. For stock option and stock futures contracts, the gross open position across all derivative contracts on a particular underlying stock of a scheme of a mutual fund shall not exceed the higher of:

1% of the free float market capitalization (in terms of number of shares). **or**

5% of the open interest in the derivative contracts on a particular underlying stock (in terms of number of contracts).

2. This position limits shall be applicable on the combined position in all derivative contracts on an underlying stock at a Stock Exchange.

3. For index based contracts, Mutual Funds shall disclose the total open interest held by its scheme or all schemes put together in a particular underlying index, if such open interest equals to or exceeds 15% of the open interest of all derivative contracts on that underlying index.

Exposure Limits

The exposure limits for trading in derivatives by Mutual Funds specified by SEBI vide its Circular No. Cir/IMD/DF/11/2010 dated August 18, 2010 are as follows:

1. The cumulative gross exposure through equity, debt and derivative positions should not exceed 100% of the net assets of the scheme.
2. Mutual Funds shall not write options or purchase instruments with em-bedded written options.
3. The total exposure related to option premium paid must not exceed 20% of the net assets of the scheme.
4. Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.
5. Exposure due to hedging positions may not be included in the above mentioned limits subject to the following:
 - a. Hedging positions are the derivative positions that reduce possible losses on an existing position in securities and till the existing position remains.
 - b. Hedging positions cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under limits mentioned in Point 1.
 - c. Any derivative instrument used to hedge has the same underlying security as the existing position being hedged.
 - d. The quantity of underlying associated with the derivative position taken for hedging purposes does not exceed the quantity of the existing position against which hedge has been taken.
6. Mutual Funds may enter into plain vanilla interest rate swaps for hedging purposes. The counter party in such transactions has to be an entity recognized as a market maker by RBI. Further, the value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme. Exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme.
7. Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned in point 1.
8. Definition of Exposure in case of Derivative Positions

Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss. Exposure in derivative positions shall be computed as follows:

Position	Exposure
Long Future	Futures Price * Lot Size * Number of Contracts
Short Future	Futures Price * Lot Size * Number of Contracts
Option Bought	Option Premium Paid * Lot Size * Number of Contracts

E. WHAT ARE THE INVESTMENT STRATEGIES?

This Scheme aims to achieve its objectives by investing in strong companies at prices which are below fair value in the opinion of the Fund Manager.

The Scheme defines a "strong company" as one that has the following characteristics:

- strong management, characterized by competence and integrity
- strong position in its business (preferably market leadership)
- efficiency of operations, as evidenced by profit margins and asset turnover, compared to its peers in the industry
- working capital efficiency
- consistent surplus cash generation
- high profitability indicators (returns on funds employed)

In common parlance, such companies are also called 'Blue Chips'.

The Scheme defines "reasonable prices" as:

- a market price quote that is around 30% lower than its value, as determined by the discounted value of its estimated future cash flows
- a P/E multiple that is lower than the company's sustainable return on funds employed
- a P/E to growth ratio that is lower than those of the company's competitors
- in case of companies in cyclical businesses, a market price quote that is around 50% lower than its estimated replacement cost

Note: The Scheme does not consider it essential for all companies in the portfolio to satisfy all these criteria. These are used as guidelines for assessing the valuation of companies.

The Scheme may also invest upto 25% of net assets of the Scheme in derivatives such as Futures & Options and such other derivative instruments as may be introduced from time to time for the purpose of hedging and portfolio balancing and other uses as may be permitted under the Regulations and guidelines.

The Scheme may also invest a part of its net assets, not exceeding 40% of its net assets, in overseas markets in Global Depository Receipts (GDRs), ADRs, overseas equity, bonds and mutual funds and such other instruments as may be allowed under the Regulations from time to time. Please refer to the Section **Investments by the Scheme in ADR/GDR/ Foreign Securities** on **Page 16**.

Subject to the Regulations and the applicable guidelines, the Scheme may, engage in Stock Lending activities. Please refer to the Section on **Page 16** on Stock Lending by the Fund.

If the investment in equities and related instruments falls below 70% of the portfolio of the Scheme at any point in time, it would be endeavoured to review and rebalance the composition.

The Scheme will retain the flexibility to invest in the entire range of debt instruments and money market instruments. Investment in Debt securities (including securitised debt) and Money Market Instruments will be as per the limits in the asset

allocation table of the Scheme, subject to permissible limits laid under SEBI (MF) Regulations. Please refer to 'Debt securities' and 'Money Market Instruments' under the section **'WHERE WILL THE SCHEME INVEST'** on **Page 18**.

Though every endeavor will be made to achieve the objectives of the Scheme, the AMC/Sponsors/Trustee do not guarantee that the investment objectives of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme.

Risk Control

Investments made from the net assets of the Scheme would be in accordance with the investment objective of the Scheme and the provisions of the SEBI (MF) Regulations. The AMC will strive to achieve the investment objective by way of a judicious portfolio mix comprising of Debt and Money Market Instruments and equity / equity related instruments. Every investment opportunity in Debt and Money Market Instruments would be assessed with regard to credit risk, interest rate risk, liquidity risk, derivatives risk and concentration risk.

Credit Evaluation Policy

The credit evaluation policy of the AMC entails evaluation of credit fundamentals of each investment opportunity. Some of the factors that are evaluated inter-alia may include outlook on the sector, parentage, quality of management, and overall financial strength of the credit. The AMC utilises ratings of recognised rating agencies as an input in the credit evaluation process. Investments in bonds and debenture are usually in instruments that have been assigned high investment grade ratings by a recognized rating agency.

In line with SEBI Circular No. MFD/CIR/9/120/ 2000 dated November 24, 2000, the AMC may constitute committee(s) to approve proposals for investments in unrated instruments. The AMC Board and the Trustee shall approve the detailed parameters for such investments. The details of such investments would be communicated by the AMC to the Trustee in their periodical reports. It would also be clearly mentioned in the reports, how the parameters have been complied with. However, in case any security does not fall under the parameters, the prior approval of Board of AMC and Trustee shall be sought.

Interest Rate Risk

An interest rate scenario analysis would be performed on an on-going basis, considering the impact of the developments on the macro-economic front and the demand and supply of funds. Based on the above analysis, the AMC would manage the investments of the Scheme on a dynamic basis to exploit emerging opportunities in the investment universe and manage risks at all points in time.

Liquidity Risk

The AMC will attempt to reduce liquidity risk by investing in securities that would result in a staggered maturity profile of the portfolio, investment in structured securities that provide easy liquidity and securities that have reasonable secondary market activity. In the event of a requirement to liquidate all or a substantial part of these investments in a very short duration of time, the AMC may not be able to realize the full value of these securities to an adverse impact on the Net Asset Value of the Scheme.

Derivatives Risk

The AMC has provision for using derivative instruments for portfolio balancing and hedging purposes. Interest Rate Swaps will be done with approved counter parties under pre approved ISDA agreements. Mark to Market of swaps, netting off of cash flow and default provision clauses will be provided as per standard practice on a reciprocal basis.

Interest Rate Swaps and other derivative instruments will be used as per local (RBI and SEBI) regulatory guidelines.

Concentration Risk

The AMC will mitigate this risk by investing in sufficiently large number of issuers spread across the sectors so as to maintain optimum diversification and keep issuer/sector specific concentration risk relatively low.

Strategies for Investment in Derivatives as per derivative strategy of the Scheme

Basic Structure of an Index Future

Index Futures are instruments designed to give exposure to the equity market indices. BSE Limited and the National Stock Exchange of India Limited have started trading in index futures of 1, 2 and 3 month maturities. The pricing of an index future is the function of the underlying index and short term interest rates.

Example:

Assumptions:

1 month BSE 30 Future

Spot Index: 4900

Future Price on day 1: 4920

Fund buys 10,000 futures contracts

On Date of settlement

Future price = Closing spot price = 4950

Profits for the Fund = $(4950-4920) \times 10000 = \text{Rs. } 300,000$
+ interest for the 1 month period

Please note that the above example is given for illustration purposes only.

The net impact for the Fund will be in terms of the difference between the closing price of the index and cost price (ignoring margins for the sake of simplicity) plus interest costs on funds that would otherwise be invested in stocks comprising the index. The risks associated with index futures are similar to those associated with equity investments. Additional risks could be on account of illiquidity and/or mis pricing of the future at any time during the life of the contract.

The strategies below are given for illustration purposes only. Some of the strategies involving derivatives that may be used by the Investment Manager, with an aim to protect capital and enhance returns include :

Strategy Number 1

■ Using Index Futures to increase percentage investment in equities

This strategy will be used for the purpose of generating returns on idle cash, pending its investment in equities. The Scheme is subject to daily flows. There may be a time lag between the inflow of funds and their deployment in stocks. If so desired, the scheme would be able to take immediate exposure to equities via index futures. The position in index futures may be reversed in a phased manner, as the funds are deployed in the equity markets.

Example:

The scheme has a corpus of Rs. 50 crore and there is an inflow of Rs. 5 crore in a day. The AMC may buy index futures contracts of a value of Rs. 5 crore. Later as the money is deployed in the underlying equities, the value of the index futures contracts can be suitably reduced.

Portfolio	Event	Equity Portfolio Gain / (Loss) (Rs. in crore)	Derivative Gain / (Loss) (Rs. in crore)	Total Portfolio Gain / (Loss) (Rs. in crore)
Rs. 50 Crore Equity exposure	10% rise in equity prices	5	Nil	5
Rs. 50 Crore Equity exposure + Rs. 5 Crore long position index futures	10% rise in equity prices	5	0.5	5.5
Rs. 50 Crore Equity exposure	10% fall in equity prices	(5)	Nil	(5)
Rs. 50 Crore Equity exposure + Rs. 5 Crore long position index futures	10% fall in equity prices	(5)	(0.5)	(5.5)

RISKS

- The strategy of taking a long position in index futures increases the exposure to the market. The long position is positively correlated with the market. However, there is no assurance that the stocks in the portfolio and the index behave in the same manner and thus this strategy may not provide gains perfectly aligned to the movement in the index.
- The long position will have as much loss / gain as in the underlying index. e.g. if the index appreciates by 10%, the index future value rises by 10%. However, this is true only for futures contracts held till maturity. In the event that a futures contract is closed out before its expiry, the quoted price of the futures contract may be different from the gain/ loss due to the movement of the underlying index. This is called the basis risk.
- While futures markets are typically more liquid than the underlying cash market, there can be no assurance that ready liquidity would exist at all points in time, for the Scheme to purchase or close out a specific futures contract.

Strategy Number 2

■ Downside Protection Using Stock Put

As a stock hedging strategy, the purchase of a put option on an underlying stock held would lead to a capping of the loss in value of the stock in the event of a material decline in the stock's price.

The purchase of a put option against a stock holding in the scheme gives the scheme the option of selling the stock to the writer of the put at the predetermined level of the Put Option, called the strike price. If the stock falls below this level, the downside for the scheme is protected as it has already locked into the selling price. In case of a fall in the stock's price below the strike price, the value of the Put Option appreciates, approximately corresponding to the extent of the stock's price fall below the strike price.

Example:

Let us assume 20000 shares of XYZ Limited held in the portfolio with a market value of Rs. 1000 per share (overall Rs. 2 crores). The scheme purchases put options on the stock of XYZ Limited (not exceeding its holding of 20000 shares) with a strike price of Rs. 990 for an assumed cost (called Option Premium) of Rs.15 per share (Rs. 3 lakhs for 20000 shares).

By purchasing the above Put Option, the scheme has effectively set a floor to the realisation from the stock at Rs. 975 per share (Rs. 990 strike price less Rs. 15 Option Premium paid).

In case the stock price of the company falls below Rs. 975 per share, the gain in the price of the Put Option when added to the actual market price of the stock would bring the sale realisation per share close to Rs. 975 per share.

After purchasing the above Put Option, in case the price of the stock appreciates, remains around Rs. 1000 or declines slightly to remain above the strike price, the scheme may not avail of the option and the cost for having bought the option remains fixed at Rs. 15 per share.

In effect, a floor (in this case effectively Rs. 975) is set to the stock by buying an Option at a cost that is known (in this case Rs. 15 per share).

RISKS

- There can be no assurance that ready liquidity would exist at all points in time, for the scheme to purchase or close out a specific options contract.
- A hedging strategy using Put Options is a perfect hedge on the expiration date of the put option. On other days, there may be (temporary) imperfect correlation between the share price and the put option.

Strategy Number 3

- Using Call option on Index to increase percentage investment in equities This strategy will be used for the purpose of participating in the upside of the market.

Example:

Suppose, the Scheme has a corpus of Rs. 100 crore and the Scheme on March 6, 2017 buys upto maximum 20% of the net assets into Index call option wherein strike price of Nifty 9,100 March 2017 index call option is Rs. 64.

Based on the above strategy the net assets of the Scheme will be as under:

Existing Scheme Net Assets		Revised Scheme Net Assets	
Asset Type	Rs. (in crores)	Asset Type	Rs. (in crores)
Equity	70	Equity	70
Net Current Assets	30	Option Premium* (20% of 100 crores)	20
		Net Current Assets	10
Total Assets	100	Total Assets	100

* Option premium paid is to take an additional exposure of around Rs. 50 crores of equities. Therefore, the total exposure to equity assets due to the said strategy will be around Rs. 120 crores (i.e. Rs. 70+ Rs. 50).

As the market index goes up the value of call option will increase. Thus, one can participate in the upside of the market as shown in the table below.

Date	Closing Nifty 50 Index Value	Call Premium for March 2017 expiry (Rs.)
06/03/2017	8,963	64
31/03/2017	9,127	93

Thus, the gain on the above strategy for the Scheme will be Rs. 29 (Rs. 93 - Rs. 64).

RISKS

- The strategy of taking a long position in index call option increases the exposure to the market. The long position is positively correlated with the market. However, there is no assurance that the stocks in the portfolio and the index behave in the same manner and thus this strategy may not provide gains perfectly aligned to the movement in the index.
- The risk/downside, if the market falls/remains flat is only limited to the option premium paid.

- The long position will have as much loss / gain as in the underlying index. For e.g. if the index appreciates by 10%, the index options value rises by 10%. However, this is true only for options held till maturity.
- While option markets are typically less liquid than the underlying cash market, hence there can be no assurance that ready liquidity would exist at all points in time, for the Scheme to purchase or close out a specific contract.

In terms of Circular No. MFD.BC.191/07.01.279/1999-2000 and MPD.BC.187/07.01.279/1999-2000 dated November 1, 1999 and July 7, 1999 respectively issued by Reserve Bank of India permitting participation by Mutual Funds in Interest Rate Swaps and Forward Rate Agreements. These products were introduced for deepening the country's money market. The Scheme may trade in these instruments for the purpose of hedging and portfolio balancing or to undertake any other strategy as permitted under SEBI (MF) Regulations from time to time. SEBI has also permitted trading of interest rate derivatives through Stock Exchange.

Interest Rate Swaps (IRS)

All swaps are financial contracts, which involve exchange (swap) of a set of payments owned by one party for another set of payments owned by another party, usually through an intermediary (market maker). An IRS can be defined as a contract between two parties (Counter Parties) to exchange, on particular dates in the future, one series of cash flows, (fixed interest) for another series of cashflows (variable or floating interest) in the same currency and on the same principal for an agreed period of time. The exchange of cashflows need not occur on the same date.

It may be noted that in such hedged positions (fixed v/s floating or vice versa), both legs of the transactions have interest rate volatility as underlying.

Basic Structure of a Swap

Assume that the Scheme has a Rs. 20 crore floating rate investment linked to MIBOR (Mumbai Inter Bank Offered Rate). Hence, the Scheme is currently running an interest rate risk and stands to lose if the interest rate moves down. To hedge this interest rate risk, the Scheme can enter into a 6 month MIBOR swap. Through this swap, the Scheme will receive a fixed predetermined rate (assume 12%) and pays the "benchmark rate" (MIBOR), which is fixed by the National Stock Exchange of India limited (NSE) or any other agency such as Reuters. This swap would effectively lock-in the rate or 12% for the next 6 months, eliminating the daily interest rate risk.

This usually routed through an intermediary who runs a book and matches deals between various counterparties.

The steps will be as follows -

- Assuming the swap is for Rs. 20 crore November 1, 2016 to May 1, 2017. The Scheme is a fixed rate receiver at 12% and the counterparty is a floating rate receiver at the overnight rate on a compounded basis (say NSE MIBOR).
- On November 1, 2016 the Scheme and the counterparty will exchange only a contract of having entered this swap. This documentation would be as per International Swap Dealers Association (ISDA).

- On a daily basis, the benchmark rate fixed by NSE will be tracked by them.
- On May 1, 2017 they will calculate the following-
 - The Scheme is entitled to receive interest on Rs. 20 crore at 12% for 184 days i.e. Rs. 1.21 crore, (this amount is known at the time the swap was concluded) and will pay the compounded benchmark rate.
 - The counterparty is entitled to receive daily compounded call rate for 184 days & pay 12% fixed.
 - On May 1, 2017, if the total interest on the daily overnight compounded benchmark rate is higher than Rs. 1.21 crore, the Scheme will pay the difference to the counterparty. If the daily compounded benchmark rate is lower, then the counterparty will pay the Scheme the difference.
 - Effectively the Scheme earns interest at the rate of 12% p.a. for six months without lending money for 6 months fixed, while the counterparty pays interest @ 12% p.a. for 6 months on Rs. 20 crore, without borrowing for 6 months fixed.

The above example illustrates the benefits and risks of using derivatives for hedging and optimizing the investment portfolio. Swaps have their own drawbacks like credit risk, settlement risk. However, these risks are substantially reduced as the amount involved is interest streams and not principal.

Forward Rate Agreement

A FRA is an agreement between two counter parties to pay or to receive the difference between an agreed fixed rate (the FRA rate) and the interest rate prevailing on a stipulated future date, based on a notional amount, for an agreed period. In short, in a FRA, interest rate is fixed now for a future period. The special feature of FRAs is that the only payment is the difference between the FRA rate and the Reference rate and hence are single settlement contracts. As in the case of IRS, notional amounts are not exchanged.

Assume that on April 1, 2017, the 30 day commercial paper (CP) rate is 7.75% and the Scheme has an investment in a CP of face value Rs. 25 crores, which is going to mature on April 30, 2017. If the interest rates are likely to remain stable or decline after April 30, 2017, and if the fund manager, who wants to re-deploy the maturity proceeds for 1 more month, does not want to take the risk of interest rates going down, he can then enter into a following forward rate agreement (FRA) say as on April 30, 2017:

He can receive 1 X 2 FRA on April 30, 2017 at 7.75% (FRA rate for 1 months lending in 2 months time) on the notional amount of Rs. 25 crores, with a reference rate of 30 day CP benchmark. If the CP benchmark on the settlement date i.e. April 30, 2017 falls to 7.50%, then the Scheme receives the difference 7.75 - 7.50 i.e. 25 basis points on the notional amount Rs. 25 crores for 1 month. The maturity proceeds are then reinvested at say 7.50% (close to the benchmark). The scheme, however, would have locked in the rate prevailing on April 30, 2017 (7.75%) as it would have received 25 basis points more as settlement amount from FRA. Thus the fund manager can use FRA to mitigate the reinvestment risk.

In this example, if the rates move up by 25 basis points to 8% on the settlement date (April 30, 2017), the Scheme loses 25 basis points but since the reinvestment will then happen at 8%, effective returns for the Scheme is unchanged at 7.75%, which is the prevailing rate on April 30, 2017.

Interest Rate Futures (IRFs):

An Interest Rate Futures contract is “an agreement to buy or sell a debt instrument at a specified future date at a price that is fixed today.” The underlying security for Interest Rate Futures is either Government Bond or T-Bill. Currently, exchange traded Interest Rate Futures traded on exchange are standardized contracts based on 10-Year Government of India Security and 91-day Government of India Treasury Bill. IRFs contracts are cash settled.

Holders of the fixed income securities are exposed to the risk of rising interest rates, which in turn results in the reduction in the value of their portfolio. So in order to protect against a fall in the value of their portfolio due to falling bond prices, they can take short position in IRF contracts.

Example:

Date: 01/04/2017

Spot price of GOI Security: Rs 105.05

May Futures price of IRF Contract: Rs 105.12

On 01/04/2017 ABC bought 2000 GOI securities from spot market at Rs 105.05. He anticipates that the interest rate will rise in near future. Therefore to hedge the exposure in underlying market he may sell April 2017 Interest Rate Futures contracts at Rs 105.12

On 15/04/2017 due to increase in interest rate:

Spot price of GOI Security: Rs 104.24

Futures Price of IRF Contract: Rs 104.28

Loss in underlying market will be $(104.24 - 105.05) * 2000 =$ Rs 1,620

Profit in the Futures market will be $(104.28 - 105.12) * 2000 =$ Rs 1,680.

Risk Factors of SWAP/ Forward Rate Agreement/ Interest Rate Futures

- **Credit Risk:** This is the risk of defaults by the counterparty. This is usually negligible, as there is no exchange of principal amounts in a derivative transaction.
- **Market Risk:** Market movements may adversely affect the pricing and settlement derivatives.
- **Illiquidity Risk:** The risk that a derivative cannot be sold or purchased quickly enough at a fair price, due to lack of liquidity in the market.

PORTFOLIO TURNOVER

The Scheme is an open-ended Scheme. It is expected that there would be a number of subscriptions and redemptions on a daily basis. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the

portfolio.

G. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

BENCHMARK INDEX

NIFTY 500 Index

The NIFTY 500 is India's first broad based benchmark of the Indian capital market, representing about 95.2% of the free float market capitalization of the stocks listed on NSE as on March 31, 2017. The total traded value for the last six months ending March 2017 of all Index constituents is approximately 91.7% of the traded value of all stocks on NSE. It covers 68 industry indices with industry weightages in the index reflecting the weightages in the market. Hence, it is an appropriate benchmark for the Scheme.

The Trustee reserves the right to change the benchmark for evaluation of performance of the Scheme from time to time in conformity with the investment objectives and appropriateness of the benchmark subject to SEBI (MF) Regulations, and other prevailing guidelines, if any.

HDFC SWING SYSTEMATIC TRANSFER PLAN

HDFC Swing Systematic Transfer Plan (Swing STP) is a facility wherein unit holder(s) holding units in non-demat form can opt to transfer an amount at regular intervals from designated open-ended Scheme(s) of HDFC Mutual Fund ("**Transferor Scheme**") to the **Growth Option** of designated open-ended Scheme(s) of HDFC Mutual Fund ("**Transferee Scheme**") including a feature of Reverse Transfer from Transferee Scheme into the Transferor Scheme, in order to achieve the Target Market Value on each transfer date in the Transferee Scheme. Swing STP offers transfer facility at weekly, monthly and quarterly intervals.

The minimum amount per Swing STP installment shall be as follows:

- Swing STP - Weekly & Monthly Interval: Rs. 1,000 and any amount thereafter.
- Swing STP - Quarterly Interval: Rs. 3,000 and any amount thereafter.

There should be a minimum of 6 installments for enrolment under Weekly and Monthly Swing STP and 2 installments for Quarterly Swing STP. Beginning of quarter could be any month. There is no maximum duration for Swing STP enrollment. However, the Mutual Fund/ AMC will register Swing STP in the folio held by a minor only till the date of the minor attaining majority, even though the instructions may be for a period beyond that date. The Swing STP facility will automatically stand terminated upon the Unit Holder attaining 18 years of age.

Also, the minimum unit holder's account balance or a minimum amount of application at the time of Swing STP enrolment in the Transferor Scheme should be Rs. 12,000.

The provision of 'Minimum Redemption Amount' as specified in the Scheme Information Document(s) of the respective designated Transferor Scheme(s) (Transferee Scheme(s) in case of Reverse Transfer) and 'Minimum Application

Amount' specified in the Scheme Information Document(s) of the respective designated Transferee Scheme(s) (Transferor Scheme(s) in case of Reverse Transfer) will not be applicable for Swing STP.

The objective of Swing STP is to achieve the Total Target Market Value in the Transferee Scheme by transferring an amount from the Transferor Scheme at regular intervals in such a way so as to increase the Target Market Value of units in the Transferee Scheme systematically by a fixed amount (i.e. the first installment amount specified by the Unitholder) on the date of each transfer till the tenure of the Swing STP.

The amount to be transferred under Swing STP from Transferor Scheme to Transferee Scheme shall be calculated as follows:

- The first Swing STP installment will be processed for the first installment amount specified by the Unitholder at the time of enrollment.
- From the second Swing STP installment onwards, the transfer amount may be higher/lower than the first installment amount, as derived by the formula stated below:

(First installment amount X Number of installments including the current installment) - Market Value of the investments through Swing STP in the Transferee Scheme on the date of transfer.

In case the amounts (as specified above) to be transferred are not available in the Transferor Scheme in the unit holder's account, the residual amount will be transferred to the Transferee Scheme and Swing STP will be closed.

Reverse Transfer: On the date of transfer, if the Market Value of the investments in the Transferee Scheme through Swing STP is higher than the first installment amount X number of installments (including the current installment), then a Reverse Transfer will be effected from the Transferee Scheme to the Transferor Scheme to the extent of the difference in the amount, in order to arrive at the Target Market Value.

The total amount invested through Swing STP over its tenure in the Transferee Scheme, may be higher or lower than the Total Target Market Value of the investment (i.e. the first installment amount X total number of installments specified by the Unitholder). This may be on account of fluctuations in the Market Value of the Transferee Scheme. **If you decide to take up this facility, you should be aware of the possibility, that the total amount invested through Swing STP could be higher or lower than the Total Target Market Value of the investment.**

The redemption/ switch-out of units allotted in the Transferee Scheme shall be processed on First In First Out (FIFO) basis. **In case there is a redemption/ switch-out of any units allotted under Swing STP in the Transferee Scheme by the Unit holder, the balance installments under Swing STP will be processed as a normal STP** for the remaining installments by investing the amount indicated as first installment amount, on the date of each transfer over the balance tenure of the Swing STP, subject to availability of unit balance in the Transferor Scheme.

Swing STP will be automatically terminated if all units are liquidated or withdrawn from the Transferor Scheme or pledged or upon receipt of intimation of death of the unit holder.

Unit holders will have the right to discontinue the Swing STP facility at any time by sending a written request to the OPA. On receipt of such request, the Swing STP facility will be terminated within 15 days.

The amount transferred under the Swing STP from the Transferor Scheme to the Transferee Scheme shall be effected by redeeming units of Transferor Scheme at the Applicable NAV, **after payment of Exit Load, if any**, and subscribing to the units of the Transferee Scheme at Applicable NAV.

Exit Load, if any, prevailing on the date of enrollment shall be levied in the Transferee Scheme and Transferor Scheme (for units purchased through Reverse Transfer).

HDFC FLEXINDEX PLAN

This facility is available to Unit holders holding units in non-demat form of select debt/ liquid Schemes to automatically transfer the specified percentage of the amount registered in the Source schemes to select equity schemes on the trigger dates occurring during the period of 1 year from the date of registration. Any Unit holder can avail of this facility subject to terms and conditions contained in the HDFC FLEXINDEX PLAN form.

Presently, Unit holders under the Plan are offered twin enrolment options viz. Flexible Installment option and Fixed Installment option. The minimum Unit holder's account balance or a minimum amount of investment in the Source scheme at the time of enrolment under the Plan should be Rs. 20,000/- and in multiples of Rs. 1,000/- thereafter. However, the Unit holder has to comply with the provision of Minimum Application Amount in the Source Schemes. The Unit holders of the Source schemes have to set triggers based on the predetermined event. For the purpose of this Plan, Predetermined event means the reaching or crossing of closing Index (i.e. BSE SENSEX) levels as specified by the Unit holder.

Under Flexible Installment option the minimum percentage to be indicated against each Index level trigger is 10% and in multiples of 1% thereafter and under Fixed Installment option the percentage indicated against each Index level trigger is fixed at 25%. The cumulative percentage under each option will be equal to 100.

On the trigger date, the specified percentage of the amount registered will be transferred in the Target Scheme **after payment of Exit Load if any**, by creation of units in the Target Scheme at the closing NAV of the same day i.e. the trigger date.

Exit Load, if any, prevailing on the date of enrolment shall be levied in the Target Scheme.

Once a transaction is processed, the same will not be reversed and it will be final and binding upon the Unit holder. The AMC will require atleast 7 calendar days from the date of submission of valid enrolment forms to register the Unit holder under the Plan.

For all predetermined events the amount registered under the Plan shall be computed based on the value of the unit balance in the Source scheme, prevailing on the respective trigger dates. The transactions will be processed by the Fund only after verifying that the registered amount on each trigger date is equal to or more than the percentage value of the flexible /fixed trigger options (as indicated by the Unit holders). In case the value of the unit balance in the Source scheme on the trigger date is less than the percentage value of the flexible/ fixed trigger options or the balance is nil, then the said trigger will not be processed.

In case the date of redemption request and the trigger date coincide i.e. the date of receipt of redemption request from the Unit holder in the Source scheme and the date of event trigger date happens to be the same date, then, the redemption transaction will always be processed first. In case in there is an all unit redemption and Unit balance in the Source scheme is reduced to Nil even then the Plan will continue for a period of 1 year from the date of registration.

On completion of 1 year from the date of registration, in case Nil Triggers or few Triggers are activated, then the balance of the amount registered under the Plan will be automatically transferred into the Target scheme in 6 equal monthly installments on 1st of every month (or immediately following business day, if that day is not a business day), provided the balance amount is not less than the minimum amount of transfer per installment under Systematic Transfer Plan (STP) of the respective Target schemes. Load Structure as prevailing under STP will be applicable and the transfers will be subject to STP terms and conditions. In case, the balance amount registered under the Plan falls below the minimum amount of transfer per installment under STP, the same shall continue to remain invested in the Source scheme.

The provision of 'Minimum Redemption Amount' as specified in the Scheme Information Document(s) of the Source schemes will not be applicable for HDFC FLEXINDEX PLAN. Whereas, the provision of 'Minimum Application Amount' specified in the Scheme Information Document(s) of the Target schemes will be applicable for HDFC FLEXINDEX PLAN.

Investors who wish to enroll for the Plan are required to fill the HDFC FLEXINDEX PLAN enrolment form available with the ISCs, distributors/agents and also displayed on the website www.hdfcfund.com. The Enrolment Form complete in all respects should be submitted at any of the Official Point(s) of Acceptance (OPA) of HDFC Mutual Fund.

Unit holders will have the right to discontinue the Plan at any time by sending a written request to the OPA. Notice of such discontinuance shall be made effective within 7 calendar days from the date of receipt of the said request. Triggers, which may get activated until the effective date of discontinuation shall be processed in accordance with the terms, laid hereinabove.

The Trustee reserves the right to change the terms and conditions of the Plan at a later date on a prospective basis.

Please refer to the HDFC Flexindex Plan Enrolment Form for terms and conditions before enrolment.

Thus, there shall be no internal sub-limits within the expense ratio for expense heads mentioned under Regulation 52 (2) and (4) respectively. Further, the additional expenses under Regulation 52(6A)(c) shall also be incurred towards any of these expense heads.

The purpose of the above table is to assist the Investor in understanding the various costs and expenses that an Investor in the Scheme will bear directly or indirectly. The figures in the table above are estimates. The actual expenses that can be charged to the Scheme will be subject to limits prescribed from time to time under the SEBI (MF) Regulations. Currently these are as under:

On the first Rs. 100 crores of the daily net assets - 2.50% p.a.

- (i) To improve the geographical reach of the Scheme in smaller cities / towns as may be specified by SEBI from time to time, expenses not exceeding 0.30% p.a. of daily net assets, if the new inflows from such cities are at least (a) 30% of gross new inflows in the Scheme or (b) 15% of the average assets under management (year to date) of the Scheme, whichever is higher.

In case inflows from such cities are less than the higher of (a) or (b) above, such expenses on daily net assets of the Scheme shall be charged on proportionate basis in accordance with SEBI Circular no. CIR/IMD/DF/21/2012 dated September 13, 2012.

The amount so charged shall be utilised for distribution expenses incurred for bringing inflows from such cities. However, the amount incurred as expense on account of inflows from such cities shall be credited back to the Scheme in case the said inflows are redeemed within a period of one year from the date of investment.

Currently, SEBI has specified that the above additional expense may be charged for inflows from beyond 'Top 15 cities'. Illustration: Impact of Expense Ratio on Scheme's return:

Expense ratio, normally expressed as a percentage of Average Assets under Management, is calculated by dividing the permissible expenses under the Regulations by the average net assets.

To further illustrate the above, for the Scheme under reference, suppose an Investor invested Rs. 10,000/- under the Growth Option, the impact of expenses charged will be as under:

	Regular Plan			Direct Plan		
	Amount (Rs.)	Units	NAV (Rs.)	Amount	Units	NAV (Rs.)
Invested on March 31, 2016 (A)	10,000.00	950.299	10.523	10,000.00	931.619	10.734
Value of above investment as on March 31, 2017 (post all applicable expenses) (B)	10,902.89	950.299	11.473	10,977.89	931.619	11.784
Expenses charged during the year (other than Distribution Expenses/ Commission) (C)	150.00			150.00		
Distribution Expenses/ Commission charged during the year (D)	75.00			0.00		
Value of above investment as on March 31, 2017 (after adding back all expenses charged) (E) [E= B+C+D]	11,127.89	950.299	11.710	11,127.89	931.619	11.945
Returns (%) (post all applicable expenses) (F) [F= (B-A)/A]	9.03%			9.78%		
Returns (%) (without considering any expenses) (G) [G= (E-A)/A]	11.28%			11.28%		

Note(s):

- The purpose of the above illustration is to purely explain the impact of expense ratio charged to the Scheme and should not be construed as providing any kind of investment advice or guarantee of returns on investments.
- It is assumed that the expenses charged are evenly distributed throughout the year.
- The expenses of the Direct Plan under the Scheme will be lower to the extent of the above mentioned distribution expenses/ commission
- Calculations are based on assumed NAVs, and actual returns on your investment may be more, or less.
- Any tax impact has not been considered in the above example, in view of the individual nature of the tax implications. Each investor is advised to consult his or her own financial advisor.

SEBI issued a Consent Order no. CO/ID-6/AO/BM/ 130-132/2011 dated September 30, 2011 in this regard. The AMC also terminated the services of Mr. Nilesh Kapadia.

SEBI by its order dated July 24, 2014, inter alia, prohibited Mr. Nilesh Kapadia and certain other accused persons from accessing the securities market, or buying, selling or otherwise dealing in securities, for a period of 10 (ten) years for violation of the SEBI (Prohibition of Fraudulent and Unfair Trade Practices Relating to Securities Market) Regulations, 2003. 4. *Any pending material civil or criminal litigation incidental to the business of the Mutual Fund to which the Sponsor(s) and/ or the AMC and/ or the Board of Trustees /Trustee Company and/ or any of the directors and/ or key personnel are a party.*

As per the SEBI MF Regulations, mutual fund schemes are permitted to invest in securitised debt. Accordingly, few schemes of HDFC Mutual Fund ("the Fund") had made investment in certain Pass Through Certificates (PTCs) of certain special purpose vehicles / securitisation trusts ("the Trusts"). The returns filed by few of these securitisation trusts whose PTCs were held by the Fund were taken up for scrutiny by the Income Tax Authorities for Assessment Years 2007-08, 2008-09, 2009-10 and 2010-11. Arising out of this, they had raised a demand on such Trusts. On failure to recover the same from them, they sent demand notices to the Fund along with other Mutual Funds as beneficiaries/ contributors to such Trusts. The Fund in consultation with its tax & legal advisors has contested the applicability of such demand and got the attachment order vacated. The Securitisation Trusts have contested the matter and the ITAT has upheld their appeal and dismissed all the cross - appeals filed by the Tax Authorities. Orders Giving Effect (OGEs) from the Tax Authorities, consequent to the ITAT Orders (February 17, 2017 & February 22, 2017) are now awaited. The Tax Authorities however have 120 days to appeal in the High Court, but only on a substantial point of law.

5. *Any deficiency in the systems and operations of the Sponsor(s) and/ or the AMC and/ or the Board of Trustees/ Trustee Company which SEBI has specifically advised to be disclosed in the SID, or notified by any other regulatory agency.*

2. The migration of HDFC Capital Builder Fund (Scheme of Zurich India Mutual Fund) to HDFC Mutual Fund was approved by the Trustee at their meeting held on June 20, 2003.
3. The Scheme Information Document is an updated version of the same in line with the current laws/ regulations and other developments.
